

TYA | Simplify Risk Parity Treasury ETF

FUND OVERVIEW

The **Simplify Risk Parity Treasury ETF (TYA)** seeks to provide total return, before fees and expenses, that matches or outperforms the performance of the ICE US Treasury 20+ Year Index on a calendar quarter basis. The Fund does not seek to achieve its stated investment objective over a period of time different than a full calendar quarter.

The fund looks to target the duration of the ICE 20+ Year US Treasury Index by investing in Treasuries and Treasury futures in the intermediate portion of the curve. The fund is designed to provide significant duration from only a modest capital allocation while simultaneously attempting to harvest yield curve efficiencies from the belly of the curve.

PERFORMANCE REVIEW

Steepening of the yield curve in the second quarter helped TYA outperform the 20+ year treasury benchmark by approximately 2.5%. Rising yields across the yield curve resulted in negative return for both TYA and the benchmark, but the impact was less on TYA since the yield on the 7yr treasury (the reference treasury for 10yr future TYA invests in) rose by 0.64% as compared to 0.83% for the 20yr treasury. Additionally, the mild yield/roll down advantage of the intermediate treasuries this past quarter was offset by the convexity advantage of the long duration treasuries in the Benchmark.

Outlook for yields remain mixed, where risk or persistent recession could lead to decline in treasury yields and positive return for treasuries. After flattening in most of 2021 and 2022Q1, the risk of continued steeping persists. In that scenario TYA, with exposure to intermediate treasuries could potentially continue to outperform the longer dated treasuries.

Performance as of 06/30/22 | Inception Date: 09/27/21

**The Fund's adviser has contractually agreed, until at least October 31, 2022, to waive certain fees and/or pay expenses, in order to limit specified expenses to 0.15% of the Fund's average daily net asset.

DEFINITIONS

Coupon Yield: The annualized return earned on a bond from its preset coupon payments (i.e., no curve changes and roll yield is ignored).

Duration: A measure of the sensitivity of the price of a bond to a change in interest rates.

Global Market Portfolio: Represents all assets—stocks, bonds, real estate, commodities, and other investments issued by governments and corporations—weighted in proportion to their relative market values.

ICE 20+ Year US Treasury Index: Common industry benchmark that measures US dollar-denominated, fixed-rate, nominal debt issued by the US Treasury with 20+ years to maturity.

Market Price: The current price at which shares are bought and sold. Market returns are based upon the last trade price.

NAV: The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

Risk Parity: A portfolio construction methodology that builds portfolios by equalizing risk contributions.

Roll Yield: The annualized return earned on a bond by virtue of a bond's yield moving up or down the curve via the passage of time (i.e., no curve changes and coupon payments are ignored).

SEC 30-Day Yield: The yield is calculated with a standardized formula and represents net investment income earned by a fund over a 30-day period, expressed as an annual percentage rate based on the fund's share price. The yield includes the effect of any fee waivers and/or reimbursements. Without waivers, yields would be reduced. This is also referred to as the "standardized yield", "30-Day Yield" and "Current Yield". The unsubsidized SEC 30-Day Yield does not reflect the effect of any fee waivers and/or expense reimbursements.

Yield Curve: A line that plots yields of bonds having equal credit quality but differing maturity dates.

IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus containing this and other important information, please call (855) 772-8488, or visit SimplifyETFs.com. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed is subject to the risk that the strategy may not produce the intended results. The fund is new and has a limited operating history to evaluate.

When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund.

The Fund invests in ETFs (Exchange-Traded Funds) and is therefore subject to the same risks as the underlying securities in which the ETF invests as well as entails higher expenses than if invested into the underlying ETF directly.

Derivatives Risk: Options are a derivative investment. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments.

Short-term investment Risk: Investors holding shares of the Fund over longer-term periods may be subject to increased risk of loss. The Fund is intended to be used only for short-term investment horizons. An investor in the Fund can lose all or a substantial portion of his or her investment within a single day. The longer an investor's holding period in the Fund, the greater the potential for loss.

Futures Contract Risk: Futures contracts involve the following risks (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market; (c) leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses are potentially unlimited; (f) the possibility that the counterparty will default in the performance of its obligations.
