SIMPLIFY ETFs

CRDT | Simplify Opportunistic Income ETF

Why CRDT?

Diversified Fixed Income Exposure

Can invest across the full spectrum of fixed income securities, including U.S. Treasuries, Mortgage-Backed Securities (MBS), high yield corporate bonds, international bonds, and special situations.

Value-Driven Approach

Focused on investing opportunistically — allocating where there is compelling value rather than a benchmark allocation.

An Opportunistic Strategy Designed for Return and Resilience

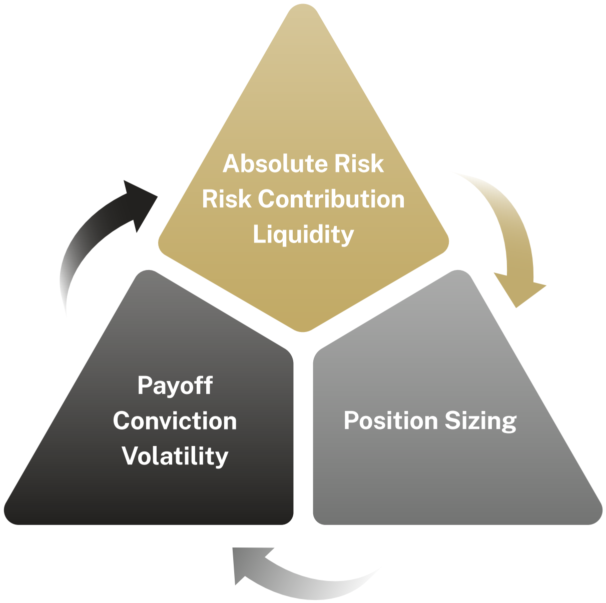
Return Drivers: Concentrated in areas where the team has comparative advantage and deep experience.

Quantitative Framework: Identify highly asymmetric payoff profiles in liquid markets

Structured Products: Capitalize on mispricing of complex or poorly understood products

Credit Research: Unlock value through intensive research in special situations

Risk Management: Disciplined guardrails calibrated to the needs of opportunistic approach but focused on stability of return profile.



Key Portfolio Benefits

- Multi-sector, opportunistic approach allows CRDT to be deployed as a single-fund fixed income solution
- Low correlations with stocks and bond indexes make CRDT an effective portfolio diversifier

The performance data quoted represents past performance and does not guarantee future results. Current performance may be lower or higher than the performance data quoted. In addition, investment returns and the principal value of an investment will fluctuate so that an investor's shares, when redeemed, may be worth more or less than their original cost. For performance data current to the most recent month-end, please call (855) 772-8488 or go to simplify.us/etfs.

Definitions

Mortgage-Backed Securities (MBS): Investment products similar to bonds. Each MBS consists of a bundle of home loans and other real estate debt bought from the banks that issued them. Investors in mortgage-backed securities receive periodic payments similar to bond coupon payments.

Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus or Summary prospectus containing this and other important information, please call (855) 772-8488, or visit SimplifyETFs.com. Please read the prospectus carefully before you invest.

An investment in the fund involves risk, including possible loss of principal.

The fund is actively-managed is subject to the risk that the strategy may not produce the intended results. The fund is new and has a limited operating history to evaluate. The Fund invests in ETFs (Exchange-Traded Funds) and entails higher expenses than if invested into the underlying ETF directly. The lower the credit quality, the more volatile performance will be. When junk bonds sell off, the lowest-rated bonds are typically hit hardest known as blow up risk. Likewise, the riskiest bonds typically rise fastest in a bull market however these investments that don't have a credit rating are typically the most volatile, hard to price and the least liquid.

The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate, or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses. The Fund's investment in fixed income securities is subject to credit risk (the debtor may default) and prepayment risk (an obligation paid early) which could cause its share price and total return to be reduced. Typically, as interest rates rise the value of bond prices will decline and the fund could lose value.

Emerging Markets Risk. Investing in emerging markets involves not only the risks described with respect to investing in foreign securities, but also other risks, including exposure to economic structures that are generally less diverse and mature, limited availability and reliability of information material to an investment decision, and exposure to political systems that can be expected to have less stability than those of developed countries. Futures Risk. The Fund's use of futures involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments.
