

## PINK | Simplify Health Care ETF

### Overview

The Simplify Health Care ETF (PINK) seeks long term capital appreciation by providing investors with multi-cap exposure to groundbreaking and innovative companies in biotech, medtech, gene therapy, and other fast growing health care related sectors.

Michael Taylor serves as lead portfolio manager of the ETF and brings over two decades of experience managing long/short health care equity portfolios at leading hedge funds. PINK is the first 100% pro bono ETF focused on the health care sector and net profits will be donated for the benefit of the Susan G. Komen foundation on an annual basis.

### Key Points

- Provides actively managed thematic exposure to biotech, medtech, gene therapy, and other fast-growing areas within the health care sector
- Aims to capture long-term growth by investing in groundbreaking and innovative companies identified through a time-tested investment process
- First of its kind 100% pro bono ETF where annual net profits will be donated for the benefit of the Susan G. Komen foundation

### Strategy Details

- PINK is concentrated in issuers in the health care sector. Lead portfolio manager Michael Taylor brings over two decades of experience managing health care equity portfolios
- PINK will provide thematic exposure to gene therapy, targeted therapeutics, CRISPR (genome editing technology), medtech, and other potentially disruptive and innovative companies in the health care sector

### Portfolio Applications

- **Long-term Growth Potential:** Aims to provide long term capital appreciation by investing in the equity securities of companies focused on the research, development, production, or distribution of products or services related to health care, medicine, or the life sciences
- **Health Care Exposure:** Provides exposure to companies that are developing new and effective medicines, as well as companies whose business models reduce costs or improve quality in the health care system
- **Research Driven Process:** Utilizes fundamental, bottom-up analysis to identify high quality companies and the most compelling investment opportunities in the broader health care sector

### DEFINITIONS:

**Market Price:** The current price at which shares are bought and sold. Market returns are based upon the last trade price.

**NAV:** The dollar value of a single share, based on the value of the underlying assets of the fund minus its liabilities, divided by the number of shares outstanding. Calculated at the end of each business day.

**MSCI USA IMI Health Care Index:** The MSCI USA Investable Market Index (IMI) Health Care is designed to capture the large, mid and small cap segments of the US equity universe.

## IMPORTANT INFORMATION:

Investors should carefully consider the investment objectives, risks, charges, and expenses of Exchange Traded Funds (ETFs) before investing. To obtain an ETF's prospectus containing this and other important information, please call (855) 772-8488, or visit [SimplifyETFs.com](http://SimplifyETFs.com). Please read the prospectus carefully before you invest.

### **An investment in the fund involves risk, including possible loss of principal.**

The fund is actively-managed is subject to the risk that the strategy may not produce the intended results. The fund is new and has a limited operating history to evaluate.

The Fund focuses its investments in securities of biotechnology and the healthcare industry. Economic, legislative or regulatory developments may occur that significantly affect these industries and cause the Fund's net asset value to fluctuate due to this concentration.

The biotechnology industry can be significantly affected by patent considerations, including the termination of patent protections for products, intense competition both domestically and internationally, rapid technological change and obsolescence, government regulation and expensive insurance costs due to the risk of product liability lawsuits.

In addition, the biotechnology industry is an emerging growth industry, and therefore biotechnology companies may be thinly capitalized have limited product lines, distribution channels, resources and more volatile than companies with greater capitalizations. Biotechnology companies must contend with high development costs, which may be exacerbated by the inability to raise prices to cover costs because of managed care pressure, government regulation or price controls. Companies in the pharmaceutical industry are heavily dependent on patent protection. The expiration of patents may adversely affect the profitability of the companies. Pharmaceutical companies are also subject to extensive litigation based liability and approval of the Food and Drug Administration, a process that can be long and costly. Expanding international operations may lead to risks resulting from differences between U.S. and foreign legal, political and economic systems, regulatory regimes and market practices.

The Fund's focus on the healthcare sector may cause its value to fluctuate and be more susceptible to particular risks of the sector such as extensive government regulations, restrictions on government reimbursement for medical expenses, rising costs of medical products and services, pricing pressure, an increased emphasis on outpatient services, changes in the demand for medical products and services, a limited number of products, industry innovation, changes in technologies and other market developments.
