FUND SUMMARY - SIMPLIFY VOLATILITY PREMIUM ETF

Investment Objective: The Simplify Volatility Premium ETF (the “Fund”) seeks to provide investment results, before fees and expenses, that correspond to approximately one-fifth to three-tenths the inverse (-0.2x to -0.3x) of the performance of the S&P 500 VIX short-term futures index while also seeking to mitigate extreme volatility.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, sell, and hold shares of the Fund. Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.50%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.00%
Interest Expense	0.00%
Acquired Fund Fees and Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.00%

(1) Other Expenses are estimated for the Fund’s initial fiscal year.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies, which are estimated for the Fund’s initial fiscal year. The operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$51	\$160

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that seeks daily investment results, before fees and expenses, that correspond to approximately one-fifth to three-tenths the inverse (-0.2x to -0.3x) of the performance of the S&P 500 VIX short-term futures index (the “Index”) for a single day, not for any other period. In pursuing its investment objective, the Fund primarily purchases or sells futures contracts, call options, and put options on VIX futures. The Fund will hold cash, cash-like instruments or high-quality short term fixed income securities (collectively, “Collateral”). The Collateral may consist of (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) fixed income ETFs; and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by companies that are rated investment grade or of comparable quality. The Fund also applies an option overlay strategy in seeking to mitigate against extreme volatility.

Option Overlay Strategy

Up to twenty percent of the Fund’s net assets will be subject to the Fund’s option overlay to mitigate against extreme volatility. The option overlay consists of purchasing exchange-traded and over the counter (“OTC”) put and call options on the Index or Index exchange traded products. When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period.

The option overlay is a strategic, persistent exposure meant to hedge against market moves and to add convexity to the Fund. If the market goes up, the Fund’s returns may outperform the market because the adviser will sell or exercise the call options. If the market goes down, the Fund’s returns may fall less than the market because the adviser will sell or exercise the put options. The adviser selects options based upon its evaluation of relative value based on cost, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on maturity or portfolio rebalancing requirements. The Fund anticipates purchasing and selling options on a monthly, quarterly, and annual basis, depending upon the Fund’s rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as market volatility renders the protection provided by the option strategy ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund’s exposure and realize gains for the Fund’s shareholders. While the option overlay is intended to improve the Fund’s performance, there is no guarantee that it will do so.

The Fund's returns are intended to possess convexity because the relationship between the Fund's returns and market returns is not designed to be linear. That is, if market returns go up and down in a linear fashion, the Fund's returns are expected to rise faster than the market in positive markets; while declining less than the market in negative markets. The value of the Fund's call options is expected to rise in proportion to the rise in value of the underlying assets, but the amount by which the Fund's options increase or decrease in value depends on how far the market has moved from the time the options position was initiated. The value of the Fund's call options may rise faster than the market if the adviser successfully selects options that appreciate in value.

The return of the Fund for a period longer than a single day is the result of its return for each day compounded over the period and usually will differ in amount and possibly even direction from the Fund's stated multiple times the return of the Index for the same period. These differences can be significant. Daily compounding of the investment return of the Fund can dramatically and adversely affect its longer-term performance, especially during periods of high volatility. Volatility has a negative impact on the Fund's performance and the volatility of the Index may be at least as important to the returns of the Fund as the return of the Index. A "single day" is measured from the time the Fund calculates its net asset value ("NAV") to the time of the Fund's next NAV calculation. The NAV calculation time for the Fund typically is 4:00 p.m. (Eastern Time).

The Index is a non-investable index that measures the implied volatility of the S&P 500. For these purposes, "implied volatility" is a measure of the expected volatility (i.e., the rate and magnitude of variations in performance) of the S&P 500 over the next 30 days. The Index does not represent the actual volatility of the S&P 500. The Index is calculated based on the prices of a constantly changing portfolio of S&P 500 put and call options.

The Fund may engage in daily rebalancing to position its portfolio so that its exposure to the Index is consistent with its daily investment objective (-0.2x to -0.3x). The impact of changes to the value of the Index each day will affect whether the Fund's portfolio needs to be rebalanced. For example, if the level of the Index has risen on a given day, net assets of the Fund should fall (assuming there were no Creation Units issued). As a result, inverse exposure may need to be decreased. Conversely, if the level of the Index has fallen on a given day, net assets of the Fund should rise (assuming there were no Creation Unit redemptions). As a result, inverse exposure may need to be increased. The time and manner in which the Fund rebalances its portfolio may vary from day to day depending upon market conditions and other circumstances at the discretion of the adviser.

The Fund expects to gain exposure to the commodities market indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly-owned and controlled subsidiary, which is designed to enhance the ability of the Fund to obtain exposure to the commodities market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. Unlike the Fund, the Subsidiary may invest without limitation indirectly in commodity-linked derivatives investments, however, the Subsidiary will comply with the same Investment Company Act of 1940 asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund's NAV and price of shares and performance.*

The following describes the risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

VIX Futures Risk. VIX futures contracts can be highly volatile and the Fund may experience sudden and large losses when buying, selling or holding such instruments; you can lose all or a portion of your investment within a single day. Investments linked to equity market volatility, including VIX futures contracts, can be highly volatile and may experience sudden, large and unexpected losses. VIX futures contracts are unlike traditional futures contracts and are not based on a tradable reference asset. The Index is not directly investable, and the settlement price of a VIX futures contract is based on the calculation that determines the level of the VIX. As a result, the behavior of a VIX futures contract may be different from a traditional futures contract whose settlement price is based on a specific tradable asset and may differ from an investor's expectations. The market for VIX futures contracts may fluctuate widely based on a variety of factors including changes in overall market movements, political and economic events and policies, wars, acts of terrorism, natural disasters (including disease, epidemics and pandemics), changes in interest rates or inflation rates. High volatility may have an adverse impact on the performance of the Fund. An investor in any of the Fund could potentially lose the full principal of his or her investment within a single day.

Daily Rebalancing Risk. The daily rebalancing of the futures contracts underlying the Index may impact trading in such futures contracts. For example, such trading may cause Futures Commission Merchants to adjust their hedges. The trading activity associated with such transactions will contribute to the existing trading volume of the underlying futures contracts and may adversely affect the market price of such underlying futures contracts and in turn the level of the Index.

Short-term investment Risk. Investors holding shares of the Fund over longer-term periods may be subject to increased risk of loss. The Fund is intended to be used only for short-term investment horizons. An investor in the Fund can lose all or a substantial portion of his or her investment within a single day. The longer an investor's holding period in the Fund, the greater the potential for loss.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance. The adviser's overlay strategy will not fully protect the Fund from declines in the market.

Cash or Cash Equivalents Risk. At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.

Compounding Risk. The return of the Fund for a period longer than a single day is the result of its return for each day compounded over the period and usually will differ in amount and possibly even direction from the Fund's stated multiple times the return of the Index for the same period.

Derivatives Risk. Options are a derivative investment. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

ETF Structure Risks: The Fund is structured as an ETF and will invest in underlying ETFs. As a result, the Fund is subject to the special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Nasdaq, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund's NAV.
 - The market price of the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less the Shares than the Fund's NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund's NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Inverse Correlation Risk. Investors will lose money when the Index rises — a result that is the opposite from traditional funds.

Leverage Risk. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses.

Limited History Risk. The Fund is a new ETF and has a limited history of operations for investors to evaluate.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Funds' portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Option Risk. As the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.

Volatility Risk. Significant short-term price movements could adversely impact the performance of the Fund. Market conditions in which significant price movements develop, but then repeatedly reverse, could cause substantial losses due to prices moving against the Fund's long or short positions (which are based on prior trends). The performance of the Fund is based in part on the prices of one or more of the VIX Futures in which the Fund invests. Each of the equity securities held by the Fund and the VIX Futures are affected by a variety of factors and may change unpredictably, affecting the value of such equity securities and VIX Futures and, consequently, the value and the market price of the Fund's Shares.

Wholly-Owned Subsidiary Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. Your cost of investing in the Fund will be higher because you indirectly bear the expenses of the Subsidiary.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.simplify.us or by calling 1 (855) 772-8488.

Investment Adviser: Simplify Asset Management Inc.

Portfolio Managers: Paul Kim, Chief Executive Officer of the adviser, and David Berns, Chief Investment Officer of the adviser, Shailesh Gupta, Managing Director of the adviser, Michael Green, Managing Director and Chief Strategist of the adviser, have each served the Fund as a portfolio manager since it commenced operations in May, 2021. Mr. Kim, Dr. Berns, Mr. Green and Mr. Gupta are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of NYSE Arca, Inc. Shares (each block of Shares is called a "Creation Unit"). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV.

Tax Information: The Fund's distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

FUND SUMMARY - SIMPLIFY COMMODITY STRATEGY ETF

Investment Objective: The Simplify Commodity Strategy ETF (the “Fund”) seeks to provide capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund. Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.50%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.00%
Interest Expense	0.00%
Acquired Fund Fees and Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.50%

(1) Other Expenses are estimated for the Fund’s initial fiscal year.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies, which are estimated for the Fund’s initial fiscal year. The operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$51	\$160

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance.

Principal Investment Strategies: The Fund is an actively managed exchange-traded fund (“ETF”) that seeks to achieve its investment objective by investing in Commodity-Related Assets (as defined below)- that are expected to perform well during periods of high inflation, and applying a convexity option overlay strategy to the Fund’s commodity investments, as discussed below.

Commodity Strategy

The Fund seeks to achieve its investment strategy by investing in: (i) exchange-traded futures contracts on commodities and commodity indices (“Commodities Futures”); (ii) exchange-traded and over-the-counter options on Commodities Futures; (iii) exchange-traded products related to or providing exposure to commodities (i.e., commodity-linked equity securities, investment companies, other ETFs, exchange-traded notes (“ETNs”) and commodity pools) (collectively, the “Commodity-Related Assets”); and (iv) cash, cash-like instruments, including U.S. Treasuries and Treasury inflation-protected securities (“TIPS”) or high-quality securities (collectively, “Collateral”). The Collateral may consist of U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; money market funds; exchange traded funds; and/or corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality. Such Collateral is designed to provide liquidity, serve as margin or otherwise collateralize investments in the Commodities Futures. While the Fund may invest directly in Commodity-Related Assets and Collateral, it may not invest directly in physical commodities.

Convexity Option Overlay Strategy

Up to twenty percent of the Fund's net assets will be subject to the Fund's convexity option overlay. The option overlay consists of purchasing exchange-traded and over the counter ("OTC") put and call options on commodity futures or exchange traded products. When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period.

The option overlay is a strategic, persistent exposure meant to hedge against market moves and to add convexity to the Fund. If the market goes up, the Fund's returns may outperform the market because the adviser will sell or exercise the call options. If the market goes down, the Fund's returns may fall less than the market because the adviser will sell or exercise the put options. The adviser selects options based upon its evaluation of relative value based on cost, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on maturity or portfolio rebalancing requirements. The Fund anticipates purchasing and selling options on a monthly, quarterly, and annual basis, depending upon the Fund's rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as market volatility renders the protection provided by the option strategy ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund's exposure and realize gains for the Fund's shareholders. While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so.

Convexity in the Fund's strategy is a reference to the mathematical term convexity. The Fund's returns are intended to possess convexity because the relationship between the Fund's returns and market returns is not designed to be linear. That is, if market returns go up and down in a linear fashion, the Fund's returns are expected to rise faster than the market in positive markets; while declining less than the market in negative markets. The value of the Fund's call options is expected to rise in proportion to the rise in value of the underlying assets, but the amount by which the Fund's options increase or decrease in value depends on how far the market has moved from the time the options position was initiated. The value of the Fund's call options may rise faster than the market if the adviser successfully selects options that appreciate in value. Unless otherwise stated, the term "convexity" in the Fund's strategy refers to the intended non-linear nature between the Fund's and the market returns; it does not refer to the concept of "bond convexity," which is a measure of the non-linear relationship between bond duration and changes in interest rates.

The Fund expects to gain exposure to the commodities market indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly-owned and controlled subsidiary, which is designed to enhance the ability of the Fund to obtain exposure to the commodities market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. Unlike the Fund, the subsidiary may invest without limitation indirectly in commodity-linked derivatives investments, however, the subsidiary will comply with the same Investment Company Act of 1940 asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund's net asset value ("NAV") and price of shares and performance.*

The following describes the risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance. The adviser's overlay strategy will not fully protect the Fund from declines in the market.

Commodity Risk. Investing in the commodities markets may subject the Fund to greater volatility than investments in traditional securities. Commodity prices may be influenced by unfavorable weather, animal and plant disease, geologic and environmental factors as well as changes in government regulation such as tariffs, embargoes or burdensome production rules and restrictions.

Derivatives Risk. Options are a derivative investment. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

ETF Structure Risks: The Fund is structured as an ETF and will invest in underlying ETFs. As a result, the Fund is subject to the special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at NAV and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the NYSE Arca, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund's NAV.
 - The market price of the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less the Shares than the Fund's NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund's NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Exchange-Traded Notes (ETNs) Risk. The value of an ETN may be influenced by, among other things, time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in underlying markets, changes in the applicable interest rates, the performance of the reference instrument, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the reference instrument. Because the return on the ETN is dependent on the issuer's ability or willingness to meet its obligations, the value of the ETN may change due to factors impacting the issuer (such as changes in the issuer's credit rating) even if there are not changes in the underlying reference instrument. The market value of ETN shares may differ from the value of the reference instrument. This difference in price may be due to the fact that the supply and demand in the market for ETN shares at any point in time is not always identical to the supply and demand in the market for the assets underlying the reference instrument that the ETN seeks to track. There may be restrictions on the Fund's right to redeem its investment in an ETN, which are generally meant to be held until maturity. The Fund's decision to sell its ETN holdings may be limited by the availability of a secondary market. An investor in an ETN could lose some or all of the amount invested.

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Futures Contract Risk. The successful use of futures contracts draws upon the adviser's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) the adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Inflation/Deflation Risk. Although the Fund is intended to provide a measure of protection against inflation, it is possible that it will not do so to the extent intended. The Fund's investments may be adversely affected to a greater extent than other investments during deflationary periods.

Leverage Risk. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses.

Limited History Risk. The Fund is a new ETF and has a limited history of operations for investors to evaluate.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Funds' portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Option Risk. As the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.

Wholly-Owned Subsidiary Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. Your cost of investing in the Fund will be higher because you indirectly bear the expenses of the Subsidiary.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.simplify.us or by calling 1(855) 772-8488.

Investment Adviser: Simplify Asset Management Inc.

Portfolio Managers: Paul Kim, Chief Executive Officer of the adviser, and David Berns, Chief Investment Officer of the adviser have each served the Fund as a portfolio manager since it commenced operations in May 2021. Mr. Kim and Mr. Berns are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a “Creation Unit”). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV.

Tax Information: The Fund’s distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

FUND SUMMARY - SIMPLIFY GOLD STRATEGY ETF

Investment Objective: The Simplify Gold Strategy ETF (the “Fund”) seeks to provide returns that reflect the performance of the price of Gold bullion.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.50%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses	0.00%
Interest Expense	0.00%
Acquired Fund Fees and Expenses ⁽¹⁾	0.00%
Total Annual Fund Operating Expenses	0.50%

(1) Other Expenses are estimated for the Fund’s initial fiscal year.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies, which are estimated for the Fund’s initial fiscal year. The operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$51	\$160

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance.

Principal Investment Strategies: The adviser seeks to achieve the Fund’s investment objective by investing primarily in gold related exchange traded funds, gold related exchange traded notes, and gold related derivatives.

Gold Strategy

The Fund will invest in Gold exchange-traded futures contracts, exchange traded funds, exchange traded notes, over-the-counter or exchange-traded derivatives contracts, and cash and cash-like instruments, including U.S. Treasuries and Treasury inflation-protected securities (“TIPS”) or high-quality securities (collectively, “Collateral”). The Collateral may consist of U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; money market funds; exchange traded funds; and/or corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality. Such Collateral is designed to provide liquidity, serve as margin or otherwise collateralize investments in exchange-traded futures contracts.

Gold bullion-related ETFs are those that invest primarily in physical Gold bullion and/or over-the-counter or exchange-traded derivatives on Gold bullion such as forward contracts, futures contracts, and options contracts or swap contracts. Gold bullion-related ETNs are those with interest and/or principal payments linked to the price of Gold bullion. Derivatives are primarily used as substitutes for Gold bullion because they are expected to produce returns that are substantially similar to those of Gold bullion. Derivatives used by the Fund are expected to produce a significant portion of the Fund’s returns. The Fund does not invest more than 25% of Fund assets in over-the-counter derivative contracts with any one counterparty. Underlying ETFs and ETNs may employ leverage, which magnifies the changes in the underlying Gold index or Gold price upon which they are based.

The Fund expects to gain exposure to the gold market indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly-owned and controlled subsidiary (the “Subsidiary”), which is designed to enhance the ability of the Fund to obtain exposure to the commodities market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. Unlike the Fund, the Subsidiary may invest without limitation indirectly in commodity-linked derivatives investments, however, the Subsidiary will comply with the same Investment Company Act of 1940 asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives.

Convexity Option Overlay Strategy

Up to twenty percent of the Fund’s net assets will be subject to the Fund’s convexity option overlay. The option overlay consists of purchasing exchange-traded and over the counter (“OTC”) put and call options on gold futures or ETFs. When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period.

The option overlay is a strategic, persistent exposure meant to hedge against market moves and to add convexity to the Fund. If the market goes up, the Fund’s returns may outperform the market because the adviser will sell or exercise the call options. If the market goes down, the Fund’s returns may fall less than the market because the adviser will sell or exercise the put options. The adviser selects options based upon its evaluation of relative value based on cost, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on maturity or portfolio rebalancing requirements. The Fund anticipates purchasing and selling options on a monthly, quarterly, and annual basis, depending upon the Fund’s rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as market volatility renders the protection provided by the option strategy ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund’s exposure and realize gains for the Fund’s shareholders. While the option overlay is intended to improve the Fund’s performance, there is no guarantee that it will do so.

Convexity in the Fund’s strategy is a reference to the mathematical term convexity. The Fund’s returns are anticipated to show convexity because the relationship between the Fund’s returns and market returns is not designed to be linear. That is, if market returns go up in a linear fashion, the Fund’s returns are expected to rise faster than the market. The value of the Fund’s call options is expected to rise in proportion to the rise in value of the underlying assets, but the amount by which the Fund’s options increase or decrease in value depends on how far the market has moved from the time the options position was initiated. The value of the Fund’s call options may rise faster than the market if the adviser successfully selects options that appreciate in value. Unless otherwise stated, the term “convexity” in the Fund’s strategy refers to the intended non-linear nature between the Fund’s and the market returns; it does not refer to the concept of “bond convexity,” which is a measure of the non-linear relationship between bond duration and changes in interest rates.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund’s net asset value and price of shares and performance.*

The following describes the risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Gold Risk. The price of Gold may be volatile and Gold bullion-related ETFs, ETNs and derivatives may be highly sensitive to the price of Gold. The price of Gold bullion can be significantly affected by international monetary and political developments such as currency devaluation or revaluation, central bank movements, economic and social conditions within a country, transactional or trade imbalances, or trade or currency restrictions between countries.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance. The adviser’s overlay strategy will not fully protect the Fund from declines in the market.

Derivatives Risk. Options are a derivative investment. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

ETF Structure Risks. The Fund is structured as an ETF and will invest in underlying ETFs. As a result, the Fund is subject to the special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Nasdaq, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund's NAV.
 - The market price of the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less the Shares than the Fund's NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund's NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Futures Contract Risk. The successful use of futures contracts draws upon the adviser's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) the adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Leverage Risk. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses.

Limited History Risk. The Fund is a new ETF and has a limited history of operations for investors to evaluate.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Funds' portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Option Risk. As the buyer of a put or call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.

TIPS Risk. TIPS are debt instruments issued by the by the United States Department of the Treasury. The principal of TIPS increases with inflation and decreases with deflation, as measured by the Consumer Price Index. When TIPS mature, investors are paid the adjusted principal or original principal, whichever is greater. Interest payments on TIPS are unpredictable and will fluctuate as the principal and corresponding interest payments are adjusted for inflation. Inflation-indexed bonds generally pay a lower nominal interest rate than a comparable non-inflation-indexed bond. There can be no assurance that the CPI will accurately measure the real rate of inflation in the prices of goods and services. Any increases in the principal amount of TIPS will be considered taxable ordinary income, even though the Fund or applicable underlying ETF will not receive the principal until maturity. As a result, the Fund may make income distributions to shareholders that exceed the cash it receives. In addition, TIPS are subject to credit risk, interest rate risk, and maturity risk

Wholly-Owned Subsidiary Risk. Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. Your cost of investing in the Fund will be higher because you indirectly bear the expenses of the Subsidiary.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.simplify.us or by calling 1 (855) 772-8488.

Investment Adviser: Simplify Asset Management Inc.

Portfolio Managers: Paul Kim, Chief Executive Officer of the adviser, and David Berns, Chief Investment Officer of the adviser have each served the Fund as a portfolio manager since it commenced operations in May 2021. Mr. Kim and Mr. Berns are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a "Creation Unit"). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV.

Tax Information: The Fund's distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

FUND SUMMARY - SIMPLIFY INTEREST RATE HEDGE ETF

Investment Objective: The Simplify Interest Rate Hedge ETF (the “Fund”) seeks to hedge interest rate movements arising from rising long-term interest rates, and to benefit from market stress when fixed income volatility increases, while providing the potential for income.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. Investors purchasing or selling shares of the Fund in the secondary market may be subject to costs (including customary brokerage commissions) charged by their broker. These costs are not included in the expense example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.50%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.00%
Interest Expense	0.00%
Acquired Fund Fees and Expenses ⁽²⁾	0.00%
Total Annual Fund Operating Expenses	0.50%

(1) Other Expenses are estimated for the Fund’s initial fiscal year.

(2) Acquired Fund Fees and Expenses are the indirect costs of investing in other investment companies, which are estimated for the Fund’s initial fiscal year. The operating expenses in this fee table will not correlate to the expense ratio in the Fund’s financial highlights because the financial statements include only the direct operating expenses incurred by the Fund.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

<u>1 Year</u>	<u>3 Years</u>
\$51	\$160

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance.

Principal Investment Strategies: The adviser seeks to achieve the Fund’s investment objective by investing in U.S. Treasuries or U.S. Treasury Inflation-Protected Securities (“TIPS”), exchange traded funds that primarily invest in U.S. Treasuries, TIPS and investment grade bonds, and swaptions and interest rate options.

The Fund invests in Treasuries or TIPS directly or through other exchange-traded funds (“ETFs”). TIPS are U.S. government bonds (specifically, Treasury securities) whose principal amount increases with inflation, as measured by the Consumer Price Index and are designed to protect investors from inflation risk. The Fund may purchase Treasuries or TIPS of any maturity. The Fund’s strategy may be appropriate for investors who are looking to have investment exposure to a portfolio that seeks to provide a hedge against interest rates.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund’s net asset value and price of shares and performance.*

The following describes the risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.

Swaptions Risk. A swaption is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. The Fund may write (sell) and purchase put and call swaptions. Depending on the terms of the particular option agreement, the Fund will generally incur a greater degree of risk when it writes a swaption than it will incur when it purchases a swaption. When the Fund purchases a swaption, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised. However, when the Fund writes a swaption, it becomes obligated (if the option is exercised) according to the terms of the underlying agreement.

TIPS Risk. TIPS are debt instruments issued by the by the United States Department of the Treasury. The principal of TIPS increases with inflation and decreases with deflation, as measured by the Consumer Price Index. When TIPS mature, investors are paid the adjusted principal or original principal, whichever is greater. Interest payments on TIPS are unpredictable and will fluctuate as the principal and corresponding interest payments are adjusted for inflation. Inflation-indexed bonds generally pay a lower nominal interest rate than a comparable non-inflation-indexed bond. There can be no assurance that the CPI will accurately measure the real rate of inflation in the prices of goods and services. Any increases in the principal amount of TIPS will be considered taxable ordinary income, even though the Fund or applicable underlying ETF will not receive the principal until maturity. As a result, the Fund may make income distributions to shareholders that exceed the cash it receives. In addition, TIPS are subject to credit risk, interest rate risk, and maturity risk.

Active Management Risk. The Fund is subject to the risk that the investment management strategy may not produce the intended results and may negatively impact Fund performance.

Counterparty Risk. Counterparty risk is the risk that a counterparty to a financial instrument held by the Fund or by a special purpose or structured vehicle invested in by the Fund may become insolvent or otherwise fail to perform its obligations, and the Fund may obtain no or limited recovery of its investment, and any recovery may be significantly delayed.

Derivatives Risk. Options are a derivative investment. The use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

ETF Structure Risks. The Fund is structured as an ETF and will invest in underlying ETFs. As a result, the Fund is subject to the special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Nasdaq, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund's NAV.
 - The market price of the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less the Shares than the Fund's NAV, which is reflected in the bid and ask price for the Shares or in the closing price.

- In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and the Fund's NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Leverage Risk. The use of leverage by the Fund, such as borrowing money to purchase securities or the use of options, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses.

Limited History Risk. The Fund is a new ETF and has a limited history of operations for investors to evaluate.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Funds' portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Non-Diversified Fund Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Option Risk. As the buyer of a call option, the Fund risks losing the entire premium invested in the option if the Fund does not exercise the option.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by the Fund in over-the-counter transactions may include an undisclosed dealer markup. The Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to the Fund.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.simplify.us or by calling 1 (855) 772-8488.

Investment Adviser: Simplify Asset Management Inc.

Portfolio Managers: Harley Bassman, Managing Partner & Convexity Maven, Paul Kim, Chief Executive Officer of the adviser, and David Berns, Chief Investment Officer of the adviser have each served the Fund as a portfolio manager since it commenced operations in May 2021. Mr. Bassman, Mr. Kim and Mr. Berns are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a “Creation Unit”). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV.

Tax Information: The Fund’s distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

INVESTMENT OBJECTIVE:

Fund	Investment Objective
Simplify Volatility Premium ETF (“Volatility ETF”)	The Fund seeks to provide investment results, before fees and expenses, that correspond approximately to one-quarter to one-half the inverse (-0.2x to -0.3x) of the performance of the S&P 500 VIX short-term futures index while seeking to mitigate extreme volatility.
Simplify Commodity Strategy ETF (“Commodity ETF”) Simplify Gold Strategy ETF (“Gold ETF”)	The Fund seeks to provide capital appreciation. The Fund seeks to provide returns that reflect the performance of the price of Gold bullion.
Simplify Interest Rate Hedge ETF (“Hedge ETF”)	The Fund seeks to hedge interest rate movements arising from rising long-term interest rates, and to benefit from market stress when fixed income volatility increases, while providing the potential for income.

Each Fund’s investment objective may be changed by the Simplify Exchange Traded Funds’ board of trustees (the “Board”) upon 60 days’ written notice to shareholders.

PRINCIPAL INVESTMENT STRATEGIES:

Volatility ETF

The Fund seeks daily investment results, before fees and expenses, that correspond approximately to one-quarter to one-half the inverse (-0.2x to -0.3x) of the performance of the SP 500 short term futures index (the “Index”) for a single day, not for any other period. In pursuing its investment objective, the Fund primarily purchases or sells futures contracts, call options, and put options on VIX futures. The Fund will hold cash, cash-like instruments or high-quality short term fixed income securities (collectively, “Collateral”). The Collateral may consist of (1) U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; (2) money market funds; (3) fixed income ETFs; and/or (4) corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by companies that are rated investment grade or of comparable quality. The Fund also applies an option overlay strategy in seeking to mitigate against extreme volatility.

The return of the Fund for a period longer than a single day is the result of its return for each day compounded over the period and usually will differ in amount and possibly even direction from the Fund’s stated multiple times the return of the Index for the same period. These differences can be significant. Daily compounding of the investment return of the Fund can dramatically and adversely affect its longer-term performance, especially during periods of high volatility. Volatility has a negative impact on the Fund’s performance and the volatility of the Index may be at least as important to the returns of the Fund as the return of the Index. A “single day” is measured from the time the Fund calculates its net asset value (“NAV”) to the time of the Fund’s next NAV calculation. The NAV calculation time for the Funds typically is 4:00 p.m. (Eastern Time).

The Index is a non-investable index that measures the implied volatility of the S&P 500. For these purposes, “implied volatility” is a measure of the expected volatility (i.e., the rate and magnitude of variations in performance) of the S&P 500 over the next 30 days. The Index does not represent the actual volatility of the S&P 500. The Index is calculated based on the prices of a constantly changing portfolio of S&P 500 put and call options.

The Fund may engage in daily rebalancing to position its portfolio so that its exposure to the Index is consistent with its daily investment objective (-0.2x to -0.3x). The impact of changes to the value of the Index each day will affect whether the Fund’s portfolio needs to be rebalanced. For example, if the level of the Index has risen on a given day, net assets of the Fund should fall (assuming there were no Creation Units issued). As a result, inverse exposure may need to be decreased. Conversely, if the level of the Index has fallen on a given day, net assets of the Fund should rise (assuming there were no Creation Unit redemptions). As a result, inverse exposure may need to be increased. The time and manner in which the Fund rebalances its portfolio may vary from day to day depending upon market conditions and other circumstances at the discretion of the Simplify Asset Management Inc. (the “Adviser”).

Option Overlay Strategy

The option overlay consists of purchasing exchange-traded and over the counter (“OTC”) put and call options on the Index or Index ETPs. When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period.

Up to twenty percent of the Fund's net assets will be subject to the Fund's convexity option overlay. The option overlay is intended to add convexity to the Fund and is intended as a strategic, persistent exposure meant to hedge against market moves and add convexity to the Fund. If the market goes up, the Fund's returns may outperform the market because the Adviser will sell or exercise the call options. If the market goes down, the Fund's returns may fall less than the market because the Adviser will sell or exercise the put options. The Adviser generally selects options with strike prices at least 5% out of the money at purchase. A call option is out of the money if the strike price is higher at the time of purchase than the market price of the underlying asset. A put option is out of the money if the strike price is lower than the market price of the underlying asset. The Adviser selects options based upon its evaluation of relative value based on cost, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on maturity or portfolio rebalancing requirements. The Fund anticipates purchasing and selling options on a monthly, quarterly, and annual basis, depending upon the Fund's rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as market volatility renders the protection provided by the option strategy ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund's exposure and realize gains for the Fund's shareholders. The Adviser actively trades options using a systematic proprietary approach that rebalances at least monthly. The Adviser manages the use of options so that the annualized cost of the option overlay does not normally exceed 5% of the net assets of the Fund. While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will improve performance.

Convexity in the Fund's strategy is a reference to the mathematical term convexity. The Fund's returns are anticipated to show convexity because the relationship between the Fund's returns and market returns is not designed to be linear. That is, if market returns go up and down in a linear fashion, the Fund's returns are expected to rise faster than the market in positive markets; while declining less than the market in negative markets. The value of the Fund's call options is expected to rise in proportion to the rise in value of the underlying assets, but the amount by which the Fund's options increase or decrease in value depends on how far the market has moved from the time the options position was initiated. The value of the Fund's call options may rise faster than the market if the Adviser successfully selects options that appreciate in value. Unless otherwise stated, the term "convexity" in the Fund's strategy refers to the intended non-linear nature between the Fund's and the market returns; it does not refer to the concept of "bond convexity," which is a measure of the non-linear relationship between bond duration and changes in interest rates.

The Fund expects to gain exposure to the commodities market indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly-owned and controlled subsidiary, which is designed to enhance the ability of the Fund to obtain exposure to the commodities market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. Unlike the Fund, the Subsidiary may invest without limitation indirectly in commodity-linked derivatives investments, however, the Subsidiary will comply with the same Investment Company Act of 1940 ("1940 Act") asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives.

Commodity ETF

The Fund seeks to achieve its investment objective by investing in commodities that are expected to perform well during periods of high inflation, and by applying a convexity option overlay strategy to the Fund's equity and commodity investments.

Commodity Strategy

The Fund seeks to achieve its investment strategy by investing in: (i) exchange-traded futures contracts on commodities and commodity indices ("Commodities Futures"); (ii) exchange-traded and over-the-counter options on Commodities Futures; (iii) exchange-traded products related to or providing exposure to commodities (i.e., commodity-linked equity securities, investment companies, other ETFs, exchange-traded notes ("ETNs") and commodity pools) (collectively, the "Commodity-Related Assets"); and (iv) cash, cash-like instruments, including U.S. Treasuries and Treasury inflation-protected securities ("TIPS") or high-quality securities (collectively, "Collateral"). The Collateral may consist of U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; money market funds; exchange traded funds; and/or corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality. Such Collateral is designed to provide liquidity, serve as margin or otherwise collateralize investments in the Commodities Futures. While the Fund may invest directly in Commodity-Related Assets and Collateral, it may not invest directly in physical commodities.

Convexity Option Overlay Strategy

Up to twenty percent of the Fund's net assets will be subject to the Fund's convexity option overlay. The option overlay consists of purchasing exchange-traded and OTC put and call options on commodity futures or the equity securities of companies that own or derive a significant portion of their value from real estate, commodities, natural resources, infrastructure and gold and other precious metals. When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period.

The option overlay is a strategic, persistent exposure meant to hedge against market moves and to add convexity to the Fund. If the market goes up, the Fund's returns may outperform the market because the Adviser will sell or exercise the call options. If the market goes down, the Fund's returns may fall less than the market because the adviser will sell or exercise the put options. The Adviser selects options based upon its evaluation of relative value based on cost, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on maturity or portfolio rebalancing requirements. The Fund anticipates purchasing and selling options on a monthly, quarterly, and annual basis, depending upon the Fund's rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as market volatility renders the protection provided by the option strategy ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund's exposure and realize gains for the Fund's shareholders. While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so.

Convexity in the Fund's strategy is a reference to the mathematical term convexity. The Fund's returns are intended to possess convexity because the relationship between the Fund's returns and market returns is not designed to be linear. That is, if market returns go up and down in a linear fashion, the Fund's returns are expected to rise faster than the market in positive markets; while declining less than the market in negative markets. The value of the Fund's call options is expected to rise in proportion to the rise in value of the underlying assets, but the amount by which the Fund's options increase or decrease in value depends on how far the market has moved from the time the options position was initiated. The value of the Fund's call options may rise faster than the market if the Adviser successfully selects options that appreciate in value. Unless otherwise stated, the term "convexity" in the Fund's strategy refers to the intended non-linear nature between the Fund's and the market returns; it does not refer to the concept of "bond convexity," which is a measure of the non-linear relationship between bond duration and changes in interest rates.

The Fund expects to gain exposure to the commodities market indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly-owned and controlled subsidiary, which is designed to enhance the ability of the Fund to obtain exposure to the commodities market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. Unlike the Fund, the Subsidiary may invest without limitation indirectly in commodity-linked derivatives investments, however, the Subsidiary will comply with the same 1940 Act asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives.

Gold Strategy ETF

The Adviser seeks to achieve the Fund's investment objective by investing primarily in gold related exchange traded funds, exchange traded notes, and gold related derivatives.

Gold Strategy

The Fund will invest in Gold exchange-traded futures contracts, exchange traded funds, exchange-traded notes ("ETNs"), over-the-counter derivative contracts, and cash and cash-like instruments, including U.S. Treasuries and Treasury inflation-protected securities ("TIPS") or high-quality securities (collectively, "Collateral"). The Collateral may consist of U.S. Government securities, such as bills, notes and bonds issued by the U.S. Treasury; money market funds; exchange traded funds; and/or corporate debt securities, such as commercial paper and other short-term unsecured promissory notes issued by businesses that are rated investment grade or of comparable quality. Such Collateral is designed to provide liquidity, serve as margin or otherwise collateralize investments in exchange-traded futures contracts.

Gold bullion-related ETFs are those that invest primarily in physical Gold bullion and/or over-the-counter or exchange-traded derivatives on Gold bullion such as forward contracts, futures contracts, and options contracts or swap contracts. Gold bullion-related ETNs are those with interest and/or principal payments linked to the price of Gold bullion. Derivatives are primarily used as substitutes for Gold bullion because they are expected to produce returns that are substantially similar to those of Gold bullion. Derivatives used by the Fund are expected to produce a significant portion of the Fund's returns. The Fund does not invest more than 25% of Fund assets in over-the-counter derivative contracts with any one counterparty. Underlying ETFs and ETNs may employ leverage, which magnifies the changes in the underlying Gold index or Gold price upon which they are based.

Convexity Option Overlay Strategy

Up to twenty percent of the Fund's net assets will be subject to the Fund's convexity option overlay. The option overlay consists of purchasing exchange-traded and OTC put and call options on gold futures and ETFs. When the Fund purchases a call option, the Fund has the right, but not the obligation, to buy a stock or other asset at a specified price (strike price) within a specific time period. When the Fund purchases a put option, the Fund has the right, but not the obligation, to sell a stock or other asset at a specified price (strike price) within a specific time period.

The option overlay is a strategic, persistent exposure meant to hedge against market moves and to add convexity to the Fund. If the market goes up, the Fund's returns may outperform the market because the Adviser will sell or exercise the call options. If the market goes down, the Fund's returns may fall less than the market because the Adviser will sell or exercise the put options. The Adviser selects options based upon its evaluation of relative value based on cost, strike price (price that the option can be bought or sold by the option holder) and maturity (the last date the option contract is valid) and will exercise or close the options based on maturity or portfolio rebalancing requirements. The Fund anticipates purchasing and selling options on a monthly, quarterly, and annual basis, depending upon the Fund's rebalancing requirements and the individual option expiration dates. However, the Fund may rebalance its option portfolio on a more frequent basis for a number of reasons such as market volatility renders the protection provided by the option strategy ineffective or an option position has appreciated to the point that it is prudent to decrease the Fund's exposure and realize gains for the Fund's shareholders. While the option overlay is intended to improve the Fund's performance, there is no guarantee that it will do so.

Convexity in the Fund's strategy is a reference to the mathematical term convexity. The Fund's returns are intended to possess convexity because the relationship between the Fund's returns and market returns is not designed to be linear. That is, if market returns go up and down in a linear fashion, the Fund's returns are expected to rise faster than the market in positive markets; while declining less than the market in negative markets. The value of the Fund's call options is expected to rise in proportion to the rise in value of the underlying assets, but the amount by which the Fund's options increase or decrease in value depends on how far the market has moved from the time the options position was initiated. The value of the Fund's call options may rise faster than the market if the Adviser successfully selects options that appreciate in value. Unless otherwise stated, the term "convexity" in the Fund's strategy refers to the intended non-linear nature between the Fund's and the market returns; it does not refer to the concept of "bond convexity," which is a measure of the non-linear relationship between bond duration and changes in interest rates.

The Fund expects to gain exposure to the gold market indirectly by investing up to 25% of its total assets (measured at the time of investment) in a wholly-owned and controlled subsidiary, which is designed to enhance the ability of the Fund to obtain exposure to the commodities market consistent with the limits of the U.S. federal tax law requirements applicable to registered investment companies. Unlike the Fund, the Subsidiary may invest without limitation indirectly in commodity-linked derivatives investments, however, the Subsidiary will comply with the same 1940 Act asset coverage requirements, when viewed on a consolidated basis with the Fund, with respect to its investments in derivatives.

Hedge ETF

The Adviser seeks to achieve the Fund's investment objective by investing in U.S. Treasuries or TIPS, exchange traded funds that primarily invest in TIPS and investment grade bonds, and swaptions and interest rate options.

The Fund invests in U.S. Treasuries and TIPS directly or through other exchange-traded funds ("ETFs"). TIPS are U.S. government bonds (specifically, Treasury securities) whose principal amount increases with inflation, as measured by the Consumer Price Index and are designed to protect investors from inflation risk. The Fund may purchase U.S. Treasuries or TIPS of any maturity.

The Fund's strategy may be appropriate for investors who are looking to have investment exposure to a portfolio that seeks to provide a hedge against interest rates.

Temporary Defensive Positions

From time to time, each Fund may take temporary defensive positions, which are inconsistent with the Fund's principal investment strategies, in attempting to respond to adverse market, economic, political, or other conditions. For example, the Funds may hold all or a portion of their respective assets in money market instruments, including cash, cash equivalents, U.S. government securities, other investment grade fixed income securities, certificates of deposit, bankers acceptances, commercial paper, money market funds and repurchase agreements. While a Fund is in a defensive position, the opportunity to achieve its investment objective will be limited. If a Fund invests in a money market fund, the shareholders of the Fund generally will be subject to duplicative management fees. Although a Fund would do this only in seeking to avoid losses, the Fund will be unable to pursue its investment objective during that time, and it could reduce the benefit from any upswing in the market.

Manager-of-Managers Order

The Trust and the Adviser have filed an exemptive application with the SEC that if granted, would permit the Adviser, with the Board's approval, to enter into sub-advisory agreements with one or more sub-advisers without obtaining shareholder approval. The exemptive order would permit the Adviser, subject to the approval of the Board, to replace sub-advisers or amend sub-advisory agreements, including fees, without shareholder approval if the Adviser and the Board believe such action will benefit the Fund and its shareholders.

PRINCIPAL INVESTMENT RISKS:

The following describes the risks born by each Fund with respect to its investments.

Active Management Risk. Each Fund is subject to the risk that its investment management strategy may not produce the intended results. There can be no assurance that the securities selected by the Adviser will produce positive returns.

Cash or Cash Equivalents Risk (Gold Convexity ETF and Volatility ETF Only). At any time, the Fund may have significant investments in cash or cash equivalents. When a substantial portion of a portfolio is held in cash or cash equivalents, there is the risk that the value of the cash account, including interest, will not keep pace with inflation, thus reducing purchasing power over time. Additionally, in rising markets, holding cash or cash equivalents may adversely affect the Fund's performance and the Fund may not achieve its investment objective.

Commodity Risk (Commodity ETF Only). The Fund's exposure to the commodities futures markets may subject the Fund to greater volatility than investments in traditional securities. The value of commodity-linked derivative instruments, commodity-based notes may be affected by changes in overall market movements, commodity index volatility, changes in interest rates, or sectors affecting a particular industry or commodity, such as drought, floods, weather, livestock disease, embargoes, tariffs, and international economic, political and regulatory developments.

Compounding Risk (Volatility ETF Only). The return of the Fund for a period longer than a single day is the result of its return for each day compounded over the period and usually will differ in amount and possibly even direction from the Fund's stated multiple times the return of the Index for the same period. These differences can be significant. Daily compounding of the investment return of the Fund can dramatically and adversely affect its longer-term performance, especially during periods of high volatility. Volatility has a negative impact on the Fund's performance and the volatility of the Index may be at least as important to the returns of the Fund as the return of the Index.

Counterparty Risk (Hedge ETF Only). The Fund may engage in transactions in securities and financial instruments that involve counterparties. Counterparty risk is the risk that a counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund may be unable or unwilling to make timely principal, interest or settlement payments, or otherwise honor its obligations. To limit the counterparty risk associated with such transactions, the Fund conducts business only with financial institutions judged by the Adviser to present acceptable credit risk.

Daily Rebalancing Risk (Volatility ETF Only). The daily rebalancing of the futures contracts underlying the Index may impact trading in such futures contracts. For example, such trading may cause Futures Commission Merchants to adjust their hedges. The trading activity associated with such transactions will contribute to the existing trading volume of the underlying futures contracts and may adversely affect the market price of such underlying futures contracts and in turn the level of the Index.

Derivatives Risk. A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships. Trading derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities including:

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Exchange-Traded Notes (ETNs) Risk (Commodity ETF and Gold ETF). The value of an ETN may be influenced by, among other things, time to maturity, level of supply and demand for the ETN, volatility and lack of liquidity in underlying markets, changes in the applicable interest rates, the performance of the reference instrument, changes in the issuer's credit rating and economic, legal, political or geographic events that affect the reference instrument. Because the return on the ETN is dependent on the issuer's ability or willingness to meet its obligations, the value of the ETN may change due to factors impacting the issuer (such as changes in the issuer's credit rating) even if there are not changes in the underlying reference instrument. The market value of ETN shares may differ from the value of the reference instrument. This difference in price may be due to the fact that the supply and demand in the market for ETN shares at any point in time is not always identical to the supply and demand in the market for the assets underlying the reference instrument that the ETN seeks to track. There may be restrictions on the Fund's right to redeem its investment in an ETN, which are generally meant to be held until maturity. The Fund's decision to sell its ETN holdings may be limited by the availability of a secondary market. An investor in an ETN could lose some or all of the amount invested.

ETF Structure Risk: Each Fund is structured as an ETF and will invest in underlying ETFs. As a result, each Fund is subject to the special risks, including:

- *Not Individually Redeemable.* A Fund's Shares ("Shares") are not redeemable by retail investors and may be redeemed only by the Authorized Participant at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange, which may result in a Fund's shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* Individual Shares of a Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. A Fund's investment results are measured based upon the daily NAV of a Fund over a period of time. Investors purchasing and selling Shares in the secondary market may not experience investment results consistent with those experienced by those Authorized Participants creating and redeeming directly with a Fund.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Shares and the Fund's NAV.
 - The market price for the Shares may deviate from a Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Shares than a Fund's NAV, which is reflected in the bid and ask price for Fund shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of a Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and a Fund's NAV.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with a Fund. A Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (*i.e.*, on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to a Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, a Fund's shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Gold Risk (Gold ETF Only). The price of Gold may be volatile and Gold bullion-related ETFs, ETNs and derivatives may be highly sensitive to the price of Gold. The price of Gold bullion can be significantly affected by international monetary and political developments such as currency devaluation or revaluation, central bank movements, economic and social conditions within a country, transactional or trade imbalances, or trade or currency restrictions between countries.

Fixed Income Securities Risk. Fixed income risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early or later than expected, potentially reducing the amount of interest payments or extending time to principal repayment). These risks could affect the value of a particular investment possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments. When a Fund invests in fixed income securities the value of your investment in a Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of debt securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. If the U.S. Federal Reserve's Federal Open Market Committee ("FOMC") raises the federal funds interest rate target, interest rates across the U.S. financial system may rise. However, the magnitude of rate changes across maturities and borrower sectors is uncertain. Rising rates may decrease liquidity and increase volatility, which may make portfolio management more difficult and costly to a Fund and its shareholders. Additionally, default risk increases if issuers must borrow at higher rates. Generally, these changing market conditions may cause a Fund's share price to fluctuate or decline more than other types of equity investments.

Futures Contract Risk (Commodity ETF and Gold ETF Only). The successful use of futures contracts draws upon the Adviser's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by a Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on a Fund and a Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) the Adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if a Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and a Fund may have to sell securities at a time when it may be disadvantageous to do so.

Inflation/Deflation Risk (Commodity ETF Only). Although the Fund is intended to provide a measure of protection against inflation, it is possible that it will not do so to the extent intended. The Fund's investments may be adversely affected to a greater extent than other investments during deflationary periods.

Inverse Correlation Risk (Volatility ETF Only). A number of factors may affect the Fund's ability to achieve a high degree of inverse correlation with the Index, and there is no guarantee that the Fund will achieve a high degree of inverse correlation. Failure to achieve a high degree of inverse correlation may prevent the Fund from achieving its investment objective, and the percentage change of the Fund's NAV each day may differ, perhaps significantly in amount, and possibly even direction, from the inverse of the percentage change of the Index on such day.

In order to achieve a high degree of inverse correlation with the Index, the Fund seeks to rebalance its portfolio daily to keep exposure consistent with its investment objective. Being materially under- or overexposed to the Index may prevent the Fund from achieving a high degree of inverse correlation with the Index and may expose the Fund to greater leverage risk. Market disruptions or closure, regulatory restrictions, market volatility, illiquidity in the markets for the financial instruments in which the Fund invests, and other factors will adversely affect the Fund's ability to adjust exposure to requisite levels. The target amount of portfolio exposure is impacted dynamically by the Index's movements, including intraday movements. Because of this, it is unlikely that the Fund will have perfect inverse exposure during the day or at the end of each day and the likelihood of being materially under- or overexposed is higher on days when the Index is volatile, particularly when the Index is volatile at or near the close of the trading day.

Leverage Risk. Using derivatives can create leverage, which can amplify the effects of market volatility on each Fund's share price and make a Fund's returns more volatile. The use of leverage may cause a Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause a Fund to have higher expenses than those of other funds that do not use such techniques.

Limited History of Operations. The Funds are new ETFs and have limited history of operations for investors to evaluate. Investors in a Fund bear the risk that a Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in a Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation. The Adviser may not achieve its intended result in managing a Fund.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in a Fund's portfolios may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The current novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses, has had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your investment.

Non-Diversified Fund Risk (Hedge ETF Only). Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or a relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

Options Risk. The Funds' may purchase call and put options on securities in which it invests and on ETFs in which a Fund invests. A Fund may engage in these transactions to hedge against a decline in the value of securities owned or an increase in the price of securities which a Fund plans to purchase.

- *Call Options (Gold ETF, Volatility & Commodity ETF).* When a Fund purchases a call option, it receives, in return for the premium it pays, the right to buy from the writer of the option the underlying security at a specified price at any time before the option expires. A Fund purchases call options in anticipation of an increase in the market value of securities that it intends ultimately to buy. During the life of the call option, a Fund is able to buy the underlying security at the exercise price regardless of any increase in the market price of the underlying security. In order for a call option to result in a gain, the market price of the underlying security must exceed the sum of the exercise price, the premium paid, and transaction costs.
- *Put Options (Gold ETF, Volatility & Commodity ETF).* When a Fund purchases a put option, it receives, in return for the premium it pays, the right to sell to the writer of the option the underlying security at a specified price at any time before the option expires. A Fund purchases put options in anticipation of a decline in the market value of the underlying security. During the life of the put option, a Fund is able to sell the underlying security at the exercise price regardless of any decline in the market price of the underlying security. In order for a put option to result in a gain, the market price of the underlying security must decline, during the option period, below the exercise price enough to cover the premium and transaction costs.

Over-the-Counter Market Risk. Securities and options traded in over-the-counter markets may trade less frequently and in limited volumes and thus exhibit more volatility and liquidity risk, and the prices paid by a Fund in over-the-counter transactions may include an undisclosed dealer markup. A Fund is also exposed to default by the over-the-counter option writer who may be unwilling or unable to perform its contractual obligations to a Fund.

Short-term investment Risk (Volatility ETF Only). Investors holding shares of the Fund over longer-term periods may be subject to increased risk of loss. The Fund is intended to be used only for short-term investment horizons. An investor in the Fund can lose all or a substantial portion of his or her investment within a single day. The longer an investor's holding period in the Fund, the greater the potential for loss.

Swaptions Risk (Hedge ETF Only). A swaption is a contract that gives a counterparty the right (but not the obligation) to enter into a new swap agreement or to shorten, extend, cancel or otherwise modify an existing swap agreement, at some designated future time on specified terms. The Fund may write (sell) and purchase put and call swaptions. Depending on the terms of the particular option agreement, the Fund will generally incur a greater degree of risk when it writes a swaption than it will incur when it purchases a swaption. When the Fund purchases a swaption, it risks losing only the amount of the premium it has paid should it decide to let the option expire unexercised. However, when the Fund writes a swaption, it becomes obligated (if the option is exercised) according to the terms of the underlying agreement.

TIPS Risk (Hedge ETF, and Gold ETF, and Commodity ETF). TIPS are debt instruments issued by the by the United States Department of the Treasury. The principal of TIPS increases with inflation and decreases with deflation, as measured by the Consumer Price Index. When TIPS mature, investors are paid the adjusted principal or original principal, whichever is greater. Interest payments on TIPS are unpredictable and will fluctuate as the principal and corresponding interest payments are adjusted for inflation. Inflation-indexed bonds generally pay a lower nominal interest rate than a comparable non-inflation-indexed bond. There can be no assurance that the CPI will accurately measure the real rate of inflation in the prices of goods and services. Any increases in the principal amount of TIPS will be considered taxable ordinary income, even though the Fund or applicable underlying ETF will not receive the principal until maturity. As a result, the Fund may make income distributions to shareholders that exceed the cash it receives. In addition, TIPS are subject to credit risk, interest rate risk, and maturity risk.

VIX Futures Risk (Volatility ETF Only). VIX futures contracts can be highly volatile and the Fund may experience sudden and large losses when buying, selling or holding such instruments; you can lose all or a portion of your investment within a single day. Investments linked to equity market volatility, including VIX futures contracts, can be highly volatile and may experience sudden, large and unexpected losses. VIX futures contracts are unlike traditional futures contracts and are not based on a tradable reference asset. The VIX is not directly investable, and the settlement price of a VIX futures contract is based on the calculation that determines the level of the VIX. As a result, the behavior of a VIX futures contract may be different from a traditional futures contract whose settlement price is based on a specific tradable asset and may differ from an investor's expectations. The market for VIX futures contracts may fluctuate widely based on a variety of factors including changes in overall market movements, political and economic events and policies, wars, acts of terrorism, natural disasters (including disease, epidemics and pandemics), changes in interest rates or inflation rates. High volatility may have an adverse impact on the performance of the Fund. An investor in any of the Fund could potentially lose the full principal of his or her investment within a single day.

Volatility Risk (Volatility ETF Only). Significant short-term price movements could adversely impact the performance of the Fund. Market conditions in which significant price movements develop, but then repeatedly reverse, could cause substantial losses due to prices moving against the Fund's long or short positions (which are based on prior trends). The performance of the Fund is based in part on the prices of one or more of the VIX Futures in which the Fund invests. Each of the equity securities held by the Fund and the VIX Futures are affected by a variety of factors and may change unpredictably, affecting the value of such equity securities and VIX Futures and, consequently, the value and the market price of the Fund's Shares.

Wholly-Owned Subsidiary Risk (Commodity ETF, Volatility ETF, and Gold ETF). Changes in the laws of the United States and/or the Cayman Islands, under which the Fund and the Subsidiary, respectively, are organized, could result in the inability of the Fund and/or Subsidiary to operate as described in this Prospectus and could negatively affect the Fund and its shareholders. Your cost of investing in the Fund will be higher because you indirectly bear the expenses of the Subsidiary.

PORTFOLIO HOLDINGS DISCLOSURE: A description of the Funds' policies and procedures regarding the release of portfolio holdings information is available in the Funds' Statement of Additional Information ("SAI").

SUBSIDIARY:

The Gold ETF, the Volatility ETF, and Commodity ETF each execute a portion of its strategy by investing up to 25% of its total assets in a wholly-owned and controlled Subsidiary. Each Subsidiary invests the majority of its assets in commodities and other futures contracts subject to the same investment restrictions as the Fund, when viewed on a consolidated basis. The principal investment strategies and principal investment risks of a Subsidiary are also principal investment strategies and principal risks of the Fund and are reflected in this Prospectus. The financial statements of a Subsidiary are consolidated with those of the Fund. By investing in commodities indirectly through a Subsidiary, each Fund obtains exposure to the commodities markets within the federal tax requirements that apply to a Fund. Specifically, a Subsidiary provides a Fund with exposure to the commodities markets within the limitations of the federal tax requirements of Subchapter M of the Internal Revenue Code of 1986, as amended (the "Code"). Sub-chapter M requires, among other things, that at least 90% of the Fund's income be derived from securities or derived with respect to its business of investing in securities (typically referred to as "qualifying income"). Each Fund will make investments in certain commodity-linked derivatives through the Subsidiary because income from these derivatives is not treated as "qualifying income" for purposes of the 90% income requirement if a Fund invests in the derivative directly. The Internal Revenue Service has issued a number of private letter rulings to other mutual funds (unrelated to a Fund), which indicate that certain income from a fund's investment in a wholly-owned foreign subsidiary will constitute "qualifying income" for purposes of Subchapter M. Each Fund does not have a private letter ruling. To satisfy the 90% income requirement, a Subsidiary will, no less than annually, declare and distribute a dividend to a Fund, as the sole shareholder of a Subsidiary, in an amount approximately equal to the total amount of "Subpart F" income (as defined in Section 951 of the Code) generated by or expected to be generated by the Subsidiary's investments during the fiscal year. Such dividend distributions are "qualifying income" pursuant to Subchapter M (Section 851(b)) of the Code.

Because a Fund may invest a substantial portion of its assets in a Subsidiary, which may hold some of the investments described in this Prospectus, a Fund may be considered to be investing indirectly in some of those investments through its Subsidiary. For that reason, references to the Fund may also include a Subsidiary.

Each Subsidiary follows the same compliance policies and procedures, as its corresponding Fund and is subject to the same investment restrictions and limitations as the Fund when measured on a consolidated basis with a Fund. The Fund complies with the provisions of the 1940 Act governing investment policies, capital structure and leverage on an aggregate basis with the Subsidiary. In addition, the Subsidiary complies with the provisions of the 1940 Act relating to affiliated transactions and custody. The Funds' custodian also serves as the custodian to each Subsidiary.

The Adviser to the Subsidiary also complies with the provisions of the 1940 Act regarding investment advisory contracts and are considered to be investment adviser to a Fund under the 1940 Act.

CYBERSECURITY: The computer systems, networks and devices used by the Funds and their service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Funds and their service providers, systems, networks, or devices potentially can be breached. Each Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact each Fund's business operations, potentially resulting in financial losses; interference with each Fund's ability to calculate its NAV; impediments to trading; the inability of each Fund, the Adviser, and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Funds invest; counterparties with which the Funds engage in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for a Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

MANAGEMENT

INVESTMENT ADVISER: Simplify Asset Management Inc., located at 54 W 40th St, New York NY 10018, serves as each Fund's investment adviser (the "Adviser"). The Adviser is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended, and manages only the Funds.

Subject to the oversight of the Board, the Adviser is responsible for managing the Funds' investments, placing trade orders and providing related administrative services and facilities under an advisory agreement between each Fund and the Adviser. The Funds were recently formed in May 2021.

The Adviser is paid a monthly management fee at an annual rate (stated as a percentage of the average daily net assets of the Fund) of 0.50%. The management agreement between the Fund and the Adviser provides that the Adviser will pay all operating expenses of the Fund, except for any interest expenses, taxes, brokerage expenses, future Rule 12b-1 fees (if any), acquired fund fees and expenses, expenses incidental to a meeting of a Fund's shareholders.

PORTFOLIO MANAGERS

Paul Kim is the chief executive officer and co-founder of the Adviser. Prior to co-founding the Adviser in 2020, he was a portfolio manager and managing director at Principal Global Investors from 2015 to 2020, where he founded and led Principal's ETF business segment. Mr. Kim has a Bachelors degree from Dartmouth and a Masters in Business Administration in Finance from the Wharton School at the University of Pennsylvania.

David Berns, PhD, is the chief investment officer and co-founder of the Adviser. Prior to co-founding the Adviser in 2020, he founded Portfolio Designer, LLC, a company that specializes in portfolio design and from 2018 to 2019 was a managing director at Nasdaq Dorsey Wright. Prior to joining Nasdaq Dorsey Wright, Inc., he founded and developed a company that specializes in proprietary trading. He has specialized in developing asset allocation, portfolio management, and risk management systems for managing private and institutional wealth. Mr. Berns has a PhD in Physics from the Massachusetts Institute of Technology in the field of Quantum Computation.

Harley Bassman is a managing partner of the Adviser. In 2017, he founded and served as the chief investment officer for the Bassman Family Office and served as the editor for Convexity Maven, a macro-economic commentary. From 2014 to 2017, he was an executive vice-president at PIMCO, where he was responsible for PIMCO's liquid alternatives and macro investment strategy.

Mr. Shailesh Gupta is the head of trading for the Adviser. From 2012 to 2017, Mr. Gupta served as the head of trading for Commonwealth Opportunity Capital. From 2017 to 2020, he served as a portfolio manager for Anfield Capital Management.

Michael Green is the Managing Director and Chief Strategist of the Adviser. He has served as portfolio manager of the Volatility ETF since April 2021. Prior to joining the Adviser, Michael served as partner, chief strategist and portfolio manager of Logica Capital Advisers, LLC, a Los Angeles-based hedge fund focused on derivative strategies from 2020 to 2021. Prior to Logica, Michael was portfolio manager for Thiel Macro, LLC, an investment firm that manages the personal capital of Peter Thiel from 2016 to 2019. Prior to Thiel, Michael founded Ice Farm Capital, a discretionary global macro hedge fund seeded by Soros Family Management.

Mr. Kim and Mr. Berns are jointly and primarily responsible for the management of the Commodity ETF and Gold ETF.

Mr. Kim, Mr. Berns, and Mr. Bassman are jointly and primarily responsible for the management of the Hedge ETF.

Mr. Kim, Mr. Berns, Mr. Green and Mr. Gupta are jointly and primarily responsible for the management of the Volatility ETF.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed and ownership of Fund shares.

HOW SHARES ARE PRICED

The NAV of each Fund is determined at the close of regular trading (normally 4:00 p.m. Eastern Time) on each day the Exchange is open for business. NAV is computed by determining, the aggregate market value of all assets of the applicable Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The Exchange is closed on weekends and New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day ("Exchange Close"). The NAV takes into account, the expenses and fees of each Fund, including management, administration, and distribution fees, which are accrued daily. The determination of NAV for each Fund for a particular day is applicable to all applications for the purchase of shares, as well as all requests for the redemption of Creation Units, received by each Fund (or an authorized broker or agent, or its authorized designee) before the close of trading on the Exchange on that day.

Generally, each Fund's portfolio securities, including securities issued by ETFs, are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded on any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined using the “fair value” procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has delegated execution of these procedures to a fair value committee composed of one or more representatives from each of the (i) Trust, (ii) administrator, and (iii) Adviser. The committee may also enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and ratifies the execution of this process and the resultant fair value prices at least quarterly to assure the process produces reliable results.

The Funds may use independent pricing services to assist in calculating the value of each Fund’s portfolio securities.

In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Funds.

In computing the NAV, the Funds value foreign securities held by a Fund at the latest closing price on the exchange in which they are traded immediately prior to closing of the Exchange. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in a Fund’s portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before a Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before a Fund calculates its NAV, the Adviser may need to price the security using the Funds’ fair value pricing guidelines. Without a fair value price, short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of a Fund’s portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing policies will prevent dilution of a Fund’s NAV by short term traders. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other mutual funds to determine NAV, or from the price that may be realized upon the actual sale of the security.

HOW TO BUY AND SELL SHARES

Shares of the Funds are listed for trading on the Exchange under the symbols SVOL, INFC, GLDC, and PFIX. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares, and Shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year’s Day, Martin Luther King, Jr. Day, Presidents’ Day, Good Friday, Memorial Day, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

Authorized Participants that have entered into a contract with the Funds’ distributor may acquire Shares from the Funds, and Authorized Participants may tender their Shares for redemption directly to the Funds, at NAV per Share only in large blocks, or Creation Units, of 25,000 Shares. Purchases and redemptions directly with the Funds must follow each Fund’s procedures, which are described in the SAI.

The Funds may liquidate and terminate at any time without shareholder approval.

Share Trading Prices

The approximate value of Shares, an amount representing on a per share basis the sum of the current market price of the securities accepted by the Funds in exchange for Shares and an estimated cash component will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a “real-time” update of the NAV per Share because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Funds are not involved in, or responsible for, the calculation or dissemination of the approximate value of the Shares, and the Funds do not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company (“DTC”) or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or “street name” form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

Shares can only be purchased and redeemed directly from the Funds in Creation Units by Authorized Participants that have entered into a contract with the Funds’ distributor. The vast majority of trading in Shares occurs on the secondary market. Because the secondary market trades do not directly involve a Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Funds’ trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Funds, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Funds and increased transaction costs, which could negatively impact a Fund’s ability to achieve its investment objective. However, direct trading by Authorized Participants is critical to ensuring that Shares trade at or close to NAV. The Funds also employ fair valuation pricing to minimize potential dilution from market timing. In addition, the Funds impose transaction fees on purchases and redemptions of Shares to cover the custodial and other costs incurred by the Funds in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that a Fund’s trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the Shares.

DISTRIBUTION AND SERVICE PLAN

The Funds have adopted a distribution and service plan (“Plan”) pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Funds are authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services (“Service Providers”). If a Service Provider provides these services, the applicable Fund may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Funds and will not be paid by the Funds unless authorized by the Board. There are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Funds.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day’s next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on a Fund’s portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the Shares’ in-kind redemption mechanism generally will not lead to a tax event for the Funds or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid monthly for the Volatility ETF and Hedge ETF and quarterly for the Commodity ETF and Gold ETF. The Funds distribute their net realized capital gains, if any, to shareholders annually. The Funds may also pay a special distribution at the end of a calendar year to comply with federal tax requirements.

No dividend reinvestment service is provided by the Funds. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Funds for reinvestment of their dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of the Funds purchased in the secondary market.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Taxes

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- A Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

Distributions from each Fund's net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that each Fund's dividends attributable to its "qualified dividend income" (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Shares at the rate for net capital gain. A part of each Fund's dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends each Fund receives from domestic corporations subject to federal income tax (excluding Real Estate Investment Trusts) and excludes dividends from foreign corporations -- subject to similar restrictions. However, dividends a corporate shareholder deducts pursuant to that deduction are subject indirectly to the federal alternative minimum tax.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in the Funds (if that option is available). Distributions reinvested in additional Shares through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional Shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the Shares.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A distribution will reduce a Fund's NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, the Funds are required to withhold 28% of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses from sales of Shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An Authorized Participant who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the Shares being redeemed and the value of the securities. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you purchased or sold and at what price. See “Tax Status” in the SAI for a description of the newly effective requirement regarding basis determination methods applicable to Share redemptions and each Fund’s obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Shares under all applicable tax laws. See “Tax Status” in the SAI for more information.

FUND SERVICE PROVIDERS

Bank of New York Mellon is the Funds’ administrator, transfer agent, custodian and fund accountant. It has its principal office at 240 Greenwich St., New York, NY 10286, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds.

Foreside Financial Services, LLC (the “Distributor”), located at Three Canal Plaza, Suite 100, Portland, ME 04101, is the distributor for the shares of the Funds. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. (“FINRA”).

Thompson Hine LLP, 41 South High Street, 17th Floor, Columbus, Ohio 43215, serves as legal counsel to the Trust.

Cohen & Company, Ltd., located at 1350 Euclid Ave., Suite 800, Cleveland, OH 44115, serves as the Funds’ independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Funds.

OTHER INFORMATION

Continuous Offering

The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Funds on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the Securities Act of 1933 (the “Securities Act”), would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Shares that are part of an over-allotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the prospectus is available at the Exchange upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Dealers effecting transactions in the Shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Householding: To reduce expenses, you may elect to have the Funds mail only one copy of the prospectus and each annual and semi-annual report to those addresses shared by two or more accounts. If you wish to receive individual copies of these documents, please contact your financial institution.

FINANCIAL HIGHLIGHTS

Because the Funds have only recently commenced investment operations, no financial highlights are available for the Funds at this time. In the future, financial highlights will be presented in this section of the Prospectus.
