FUND SUMMARY - SIMPLIFY GAMMA EMERGING MARKET BOND ETF

Investment Objective: The Simplify Gamma Emerging Market Bond ETF (the “Fund”) seeks income and capital appreciation.

Fees and Expenses of the Fund: This table describes the fees and expenses that you may pay if you buy, hold, and sell shares of the Fund. **Investors purchasing or selling shares of the Fund in the secondary market may pay other fees, such as brokerage commissions and other fees to financial intermediaries, which are not reflected in the table or example below.**

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.95%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses ⁽¹⁾	0.01%
Total Annual Fund Operating Expenses	0.96%
Fee Waiver ⁽²⁾	0.20%
Total Annual Fund Operating Expenses After Fee Waiver	0.76%

- (1) Other Expenses are estimated for the Fund’s initial fiscal year.
- (2) The Fund’s adviser has contractually agreed, through at least October 31, 2026 to waive its management fee to 0.75% of the Fund’s average daily net assets. This agreement may be terminated only by the Trust’s Board of Trustees on 60 days’ written notice to the Fund’s adviser.

Example: This Example is intended to help you compare the cost of investing in the Fund with the cost of investing in other mutual funds.

The Example assumes that you invest \$10,000 in the Fund for the time periods indicated and then redeem all of your shares at the end of those periods. The Example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain the same. Although your actual costs may be higher or lower, based upon these assumptions your costs would be:

1 Year	3 Years
\$77	\$286

Portfolio Turnover: The Fund pays transaction costs, such as commissions, when it buys and sells securities (or “turns over” its portfolio). A higher portfolio turnover rate may indicate higher transaction costs and may result in higher taxes when Fund shares are held in a taxable account. These costs, which are not reflected in annual fund operating expenses or in the Example, affect the Fund’s performance. The Fund is a new fund and has no portfolio turnover information as of the date of this Prospectus.

Principal Investment Strategies:

The Fund is an actively managed exchange-traded fund that seeks to achieve its investment objective by investing primarily in bonds issued by, or tied economically to, issuers in emerging markets, denominated in USD or local currency.

The Fund has adopted a non-fundamental investment policy that, under normal circumstances, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in debt securities of issuers in emerging markets. Debt securities include bonds issued by governments, their agencies or instrumentalities, multilateral organizations such as World Bank (as defined below), and corporations. It is expected that the emerging markets in which the Fund will invest will include, among others, Latin America and the Caribbean. The Fund considers an emerging market country to include any country that is (1) generally recognized to be an emerging market country by International Bank for Reconstruction and Development (commonly known as “the World Bank”); (2) classified by the United Nations as a developing country; or (3) included in the MSCI Emerging Markets Index. The Fund’s sub-adviser determines that an investment is tied economically to an emerging market if such investment satisfies one or more of the following conditions: (1) the issuer’s primary trading market is in an emerging market; (2) the issuer is organized under the laws of, derives at least 50% of its revenues from, or has at least 50% of its assets in emerging markets; and (3) the investment is included in the MSCI Markets Index or the JP Morgan Emerging Market Bond Index. The Fund also may invest in non-emerging market debt securities. The Fund may hedge its non-dollar investments back to the U.S. dollar through the use of derivatives, including futures, but has the ability to invest in bonds denominated in a local currency on an unhedged basis.

The Fund may invest in high yield securities, also known as junk bonds. The Fund defines junk bonds as those rated below Baa3 by Moody’s Investors Service or below BBB- by Standard and Poor’s Rating Group, or, if unrated, determined by the adviser to be of similar credit quality.

The sub-adviser takes an opportunistic, tactical approach in selecting investments for the Fund. The Fund’s investments are not limited to securities of a particular maturity range, duration or credit rating. The sub-adviser applies a top-down macroeconomic analysis in selecting potential emerging market countries and a bottom-up analysis on specific corporate issuers.

The Fund also may invest up to 20% of its portfolio in derivatives such as emerging market credit default swaps (CDS), indices of CDS (CDX) and single-name CDS; foreign exchange (FX) instruments such as foreign currency forward contracts, foreign currency swaps and foreign currency futures contracts. In a CDS, one party makes a stream of payments to another party in exchange for the right to receive a specified return in the event of a default by a third party on its debt obligation or an index of debt obligations. CDX are designed to track a representative segment of the CDS market (in this case, emerging markets) and provide exposure to specific “baskets” of issuers of debt instruments. CDX can provide the same investment exposure as entering into an individual CDS except with more diversification. Investments in CDS, CDX and FX instruments may be made for hedging, investment and other portfolio management purposes. FX instruments will be utilized for exposure to emerging market countries’ currencies, either long or short.

The Fund expects to use these instruments to enhance portfolio flexibility and help achieve its investment objective of income and capital appreciation. Specifically, CDS and CDX may be used to gain or hedge exposure to the creditworthiness of emerging market issuers, while FX instruments may be used to hedge currency risk or express views on emerging market currencies.

When using certain derivatives, the Fund is required to post collateral to assure its performance to the counterparty. The Fund will hold cash and cash-like instruments or high-quality short term fixed income securities. The Fund may also invest in reverse repurchase agreements and use the proceeds for investment purposes. Reverse repurchase agreements are contracts in which a seller of securities, for example, U.S. government securities, agrees to buy the securities back at a specified time and price. Reverse repurchase agreements are primarily used by the Fund as an indirect means of borrowing. When the Fund earns more on its additional investments than the interest cost related to the reverse repurchase agreement, it generates additional income.

The Fund’s 80% policy may be changed by the Board of Trustees upon 60 days’ written notice to shareholders.

The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended, which means that the Fund may invest a higher percentage of its assets in a fewer number of issuers than is permissible for a “diversified” fund.

Principal Investment Risks: *As with all funds, there is the risk that you could lose money through your investment in the Fund. Many factors affect the Fund’s net asset value and price of shares and performance. The following describes the risks the Fund bears with respect to its investments. As with any fund, there is no guarantee that the Fund will achieve its goal.*

Fixed Income Securities Risk. When the Fund invests in fixed income securities, the value of your investment in the Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities owned by the Fund. In general, the market price of fixed income securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. Other risk factors include credit risk (the debtor may default), extension risk (an issuer may exercise its right to repay principal on a fixed rate obligation held by the Fund later than expected), and prepayment risk (the debtor may pay its obligation early, reducing the amount of interest payments). These risks could affect the value of a particular investment by the Fund, possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments.

Emerging Markets Risk. Investing in emerging markets involves not only the risks associated with investments in foreign securities in general, but also other risks, including exposure to economic structures that are generally less diverse and mature, limited availability and reliability of information material to an investment decision, and exposure to political systems that can be expected to have less stability than those of developed countries. The market for the securities of issuers in emerging markets typically is small, and a low or nonexistent trading volume in those securities may result in a lack of liquidity and price volatility.

Latin America Risk. The economies of Latin American countries have in the past experienced considerable difficulties, including high inflation rates, high interest rates, high unemployment, government overspending and political instability. International economic conditions, particularly those in the United States, Europe and Asia, as well as world prices for oil and other commodities may also influence the development of Latin American economies. Many Latin American countries are highly reliant on the exportation of commodities and their economies may be significantly impacted by fluctuations in commodity prices and the global demand for certain commodities.

Active Management Risk. The Fund is subject to the risk that its investment management strategy may not produce the intended results and may negatively impact Fund performance.

Counterparty and Credit Risk. The Fund may be exposed to losses if the counterparty to a financial instrument held by the Fund is unable, unwilling, or is perceived (by market participants, ratings agencies or otherwise as unable or unwilling, or otherwise) as unable or unwilling, or otherwise fails to perform its obligations. Counterparty risk may arise because of market activities and developments, the counterparty's financial condition (including financial difficulties, bankruptcy, or insolvency), or other reasons. The Fund may obtain no or limited recovery of its investment, and any recovery may be significantly delayed.

Credit Default Swaps Risk. CDS are typically two-party financial contracts that transfer credit exposure between the two parties. Under a typical CDS, one party (the "seller") receives pre-determined periodic payments from the other party (the "buyer"). The seller agrees to make compensating specific payments to the buyer if a negative credit event occurs, such as the bankruptcy or default by the issuer of the underlying debt instrument. The use of CDS involves investment techniques and risks different from those associated with ordinary portfolio security transactions, such as potentially heightened counterparty, concentration and exposure risks.

CDX Indices Risk. CDX are benchmark indices made up of credit default swaps. The CDX in which the Fund will invest are issued by emerging market companies. The value of a CDX index will fluctuate in response to changes in the perceived creditworthiness or default experience of the basket of issuers to which the CDX provides exposure. CDX are susceptible to credit risk, counterparty risk, and other risks associated with CDS.

Derivatives Risk. The Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfill its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent the Fund from buying or selling certain securities or financial instruments. In these circumstances, the Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

ETF Structure Risk. The Fund is structured as an ETF. As a result, the Fund is subject to the special risks, including:

- *Not Individually Redeemable.* The Fund's shares ("Shares") are not redeemable by retail investors and may be redeemed only by Authorized Participants at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on NYSE Arca, Inc. (the "Exchange") may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange which may result in the Shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares and will include a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the Shares. There may be times when the market price and the NAV vary significantly. This means that Shares may trade at a discount to NAV.
 - In times of market stress, market makers may step away from their role market making in the Shares and in executing trades, which can lead to differences between the market value of the Shares and the Fund's NAV.
 - The market price of the Shares may deviate from the Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less the Shares than the Fund's NAV, which is reflected in the bid and ask price for the Shares or in the closing price.
 - In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of the Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the shares and the Fund's NAV.
- *Closure of Underlying Securities Market.* To the extent that all or a portion of the Fund's underlying securities trade in a market that is closed when the market in which the Fund's shares are listed and trading in that market is open, there may be changes between the last quote from the closed foreign market and the value of such security during the Fund's domestic trading day. In turn, this could lead to differences between the market price of the Fund's shares and the underlying value of its shares.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with the Fund. The Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (i.e., on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to the Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, Fund shares may be more likely to trade at a premium or discount to net asset value and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Foreign Investment Risk: The Fund may invest in securities domiciled in countries outside the U.S. that may experience more rapid and extreme changes in value than a fund that invests exclusively in securities of U.S. companies. These investments may be subject to additional risks, including political and economic risks, less government regulation and supervision of foreign stock exchanges, brokers and listed companies, civil conflicts and war, greater volatility, expropriation and nationalization risks, currency fluctuations, higher transaction costs, delayed transaction settlement, foreign ownership limits, foreign withholding taxes, difficulties in obtaining legal judgments, repatriation of capital, and less stringent investor protection, disclosure, and accounting standards than those of U.S. market.

Foreign Currency Risk. The Fund holds investments that provide exposure to non-U.S. currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates, the relative value of non-U.S. currencies will affect the value of the Fund's investments and the value of Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and your investment in the Fund may experience losses.

Forward Contracts Risk. A decision as to whether, when, and how to use forward contracts involves the exercise of skill and judgment and even a well-conceived forward contract transaction may be unsuccessful because of market behavior or unexpected events. The primary risks associated with the use of forward contracts, which may adversely affect the Fund's net asset value ("NAV") and total return, are (i) possible lack of a liquid secondary market for a forward contract and the resulting inability to close a forward contract when desired; (ii) losses caused by unanticipated market movements, which are potentially unlimited; (iii) incorrect predictions of the direction of currency exchange rates and other economic factors; (iv) the possibility that the counterparty will default in the performance of its obligations; and (v) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Futures Contracts Risk. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by the Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involve leverage, which means a small percentage of assets in futures can have a disproportionately large impact on the Fund and the Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited; (e) the adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Leverage Risk. The use of leverage by the Fund, such as borrowing money through reverse repurchase agreements or the use of futures, will cause the Fund to incur additional expenses and magnify the Fund's gains or losses. A reverse repurchase agreement counterparty may fail to return securities to the Fund. Such securities may be costly to replace.

Limited History Risk. The Fund is a new ETF and has a limited history of operations for investors to evaluate.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in the Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, international conflicts, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your Fund investment.

Non-Diversification Risk. The Fund's portfolio may focus on a limited number of investments and will be subject to more potential for volatility than a diversified fund.

Performance: Because the Fund has only recently commenced investment operations, no performance information is presented for the Fund at this time. In the future, performance information will be presented in this section of the Prospectus. Also, shareholder reports containing financial and performance information will be mailed to shareholder semi-annually. Updated performance information will be available at no cost by visiting www.simplify.us or by calling 1 (855) 772-8488.

Investment Adviser: Simplify Asset Management Inc. (“SAMI”).

Sub-Adviser: Gamma Asset Management LLC (“Gamma”), located at Edificio Ochoa 500 Calle De La Tanca, Suite 305, San Juan, Puerto Rico, serves as investment sub-adviser to the Fund.

Portfolio Managers: David Berns, Chief Investment Officer and Ken Miller, Portfolio Manager of SAMI, and Manuel Pelayo Troncoso Acebal, CFA and chief executive officer and Douglas Roman, CFA of Gamma serve as portfolio managers of the Fund. Messrs. Berns, Miller, Troncoso and Roman have each served the Fund as a portfolio manager since it commenced operations and are jointly and primarily responsible for the management of the Fund.

Purchase and Sale of Fund Shares: The Fund will issue and redeem Shares at NAV only in large blocks of 25,000 Shares (each block of Shares is called a “Creation Unit”). Creation Units are issued and redeemed primarily in-kind for securities but may include cash. Individual Shares may only be purchased and sold in secondary market transactions through brokers. Except when aggregated in Creation Units in transactions with Authorized Participants, the Shares are not redeemable securities of the Fund.

Shares of the Fund are listed for trading on the Exchange and trade at market prices rather than NAV. Shares of the Fund may trade at a price that is greater than, at, or less than NAV. An investor may incur costs attributable to the difference between the highest price a buyer is willing to pay to purchase shares of the Fund (bid) and the lowest price a seller is willing to accept for shares of the Fund (ask) when buying or selling shares in the secondary market. Recent information on the Fund’s NAV, market price, premiums and discounts, and bid-ask spreads is available at www.simplify.us/etfs.

Tax Information: The Fund’s distributions generally will be taxable as ordinary income or long-term capital gains. A sale of Shares may result in capital gain or loss.

Payments to Broker-Dealers and Other Financial Intermediaries: If you purchase the Fund through a broker-dealer or other financial intermediary (such as a bank), the Fund and its related companies may pay the intermediary for the sale of Fund shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ADDITIONAL INFORMATION ABOUT PRINCIPAL INVESTMENT STRATEGIES AND RELATED RISKS

INVESTMENT OBJECTIVE:

Fund	Investment Objective
Simplify Gamma Emerging Market Bond ETF	seeks income and capital appreciation

The Fund's investment objective may be changed by the Board of Trustees (the "Board") upon 60 days' written notice to shareholders.

PRINCIPAL INVESTMENT STRATEGIES:

The Fund is an actively managed exchange-traded fund that seeks to achieve its investment objective by investing primarily in bonds issued by, or tied economically to, issuers in emerging markets, denominated in USD or local currency.

The Fund has adopted a non-fundamental investment policy that, under normal circumstances, the Fund will invest at least 80% of its net assets (plus any borrowings for investment purposes) in debt securities of issuers in emerging markets. Debt securities include bonds issued by governments, their agencies or instrumentalities, multilateral organizations such as World Bank (as defined below), and corporations. It is expected that the emerging markets in which the Fund will invest include, among others, Latin America and the Caribbean. The Fund considers an emerging market country to include any country that is (1) generally recognized to be an emerging market country by International Bank for Reconstruction and Development (commonly known as "the World Bank"); (2) classified by the United Nations as a developing country; or (3) included in the MSCI Emerging Markets Index. The Fund's sub-adviser determines that an investment is tied economically to an emerging market if such investment satisfies one or more of the following conditions: (1) the issuer's primary trading market is in an emerging market; (2) the issuer is organized under the laws of, derives at least 50% of its revenues from, or has at least 50% of its assets in emerging markets; and (3) the investment is included in the MSCI Emerging Index or the JP Morgan Emerging Market Bond Index. The Fund also may invest in non-emerging market debt securities. The Fund may hedge its non-dollar investments back to the U.S. dollar through the use of derivatives, including futures, but has the ability to invest in bonds denominated in a local currency on an unhedged basis.

The Fund may invest in high yield securities, also known as junk bonds. The Fund defines junk bonds as those rated below Baa3 by Moody's Investors Service or below BBB- by Standard and Poor's Rating Group, or, if unrated, determined by the adviser to be of similar credit quality.

The Fund's investments are not limited to securities of a particular duration, maturity range or credit rating. Duration is a measure of price sensitivity of a debt security or a portfolio of debt securities to relative changes in interest rates. For instance, a duration of "five years" means that a security's or portfolio's price would be expected to decrease by approximately 5% with a 1% increase in interest rates (assuming a parallel shift in yield curve). Maturity is the period during which its owner will receive interest payments on the investment. When the bond reaches maturity, the Fund is repaid its par, or face value. A bond's quality is a reference to the grade given to a bond by a rating service that indicates its credit quality. The rating takes into consideration a bond issuer's financial strength or its ability to pay a bond's principal and interest in a timely fashion. For instance, a "AAA" high-grade rated bond offers more security and lower profit potential (lower yield) than a "B-" rated speculative bond.

The Fund may invest in bonds denominated in USD as well as local currency. While the bonds in which the Fund may invest are not limited based on credit rating, it is expected that the Fund will seek to invest in bonds with at least a single B- rating. However, the Fund may invest in lower rated bonds from time as the sub-adviser deems advantageous.

The sub-adviser takes an opportunistic, tactical approach in selecting investments for the Fund. With respect to sovereign bonds and local currency bonds, the sub-adviser applies a top-down macroeconomic analysis in selecting particular emerging market countries in which to invest. With respect to corporate bonds, the sub-adviser performs a bottom-up analysis on financials and other key metrics of specific corporate issuers. The sub-adviser may sell a security due to a decline in credit quality, deteriorated local economic conditions, or if it identifies a security that it believes offers a better investment opportunity. The Fund also may hold cash or cash equivalents.

The Fund also may invest up to 20% of its portfolio in derivatives such as emerging market credit default swaps (CDS), indices of CDS (CDX) and single-name CDS; foreign exchange (FX) instruments such as foreign currency forward contracts, foreign currency swaps and foreign currency futures contracts. In a CDS, one party makes a stream of payments to another party in exchange for the right to receive a specified return in the event of a default by a third party on its debt obligation or an index of debt obligations. CDX are designed to track a representative segment of the CDS market (in this case, emerging markets) and provide exposure to specific “baskets” of issuers of debt instruments. CDX can provide the same investment exposure as entering into an individual CDS except with more diversification. Investments in CDS, CDX and FX instruments may be made for hedging, investment and other portfolio management purposes. FX instruments will be utilized for exposure to emerging market countries’ currencies, either long or short.

The Fund expects to use these instruments to enhance portfolio flexibility and help achieve its investment objective of income and capital appreciation. Specifically, CDS and CDX may be used to gain or hedge exposure to the creditworthiness of emerging market issuers, while FX instruments may be used to hedge currency risk or express views on emerging market currencies.

When using certain derivatives, the Fund is required to post collateral to assure its performance to the counterparty. The Fund will hold cash and cash-like instruments or high-quality short term fixed income securities. The Fund may also invest in reverse repurchase agreements and use the proceeds for investment purposes. Reverse repurchase agreements are contracts in which a seller of securities, for example, U.S. government securities, agrees to buy the securities back at a specified time and price. Reverse repurchase agreements are primarily used by the Fund as an indirect means of borrowing. When the Fund earns more on its additional investments than the interest cost related to the reverse repurchase agreement, it generates additional income.

The Fund’s 80% policy may be changed by the Board of Trustees upon 60 days’ written notice to shareholders.

The Fund is classified as a “non-diversified” investment company under the Investment Company Act of 1940, as amended, which means that the Fund may invest a higher percentage of its assets in a fewer number of issuers than is permissible for a “diversified” fund.

Temporary Defensive Positions

From time to time, a Fund may take temporary defensive positions, which are inconsistent with the Fund’s principal investment strategies, in attempting to respond to adverse market, economic, political, or other conditions. For example, the Fund may hold all or a portion of its assets in money market instruments, including cash, cash equivalents, U.S. government securities, other investment grade fixed income securities, certificates of deposit, bankers’ acceptances, commercial paper, money market funds and repurchase agreements. While the Fund is in a defensive position, the opportunity to achieve its investment objective will be limited. If the Fund invests in a money market fund, the shareholders of the Fund generally will be subject to duplicative management fees. Although a Fund would do this only in seeking to avoid losses, the Fund will be unable to pursue its investment objective during that time, and it could reduce the benefit from any upswing in the market.

Manager-of-Managers Order

The Trust and the Adviser have received an exemptive order from the SEC that permits the adviser, with the Board approval, to enter into sub-advisory agreements with one or more sub-advisers without obtaining shareholder approval. The exemptive order permits the adviser, subject to the approval of the Board to replace sub-advisers or amend sub-advisory agreements, including fees, without shareholder approval whenever the adviser and the Board believe such action will benefit the Fund and its shareholders.

PRINCIPAL INVESTMENT RISKS:

All funds take investment risks. Therefore, it is possible to lose money by investing in the Fund. The principal risks that may reduce the Fund's returns include the following:

Active Management Risk. The Fund is subject to the risk that its investment management strategy may not produce the intended results. There can be no assurance that the securities selected by the adviser will produce positive returns.

Counterparty and Credit Risk. The Fund may engage in transactions in securities and financial instruments that involve counterparties. The Fund may be exposed to losses if the counterparty (the other party to a transaction or an agreement or the party with whom the Fund executes transactions) to a transaction with the Fund is unable, unwilling, or is perceived (by market participants, ratings agencies or otherwise) as unable or unwilling, or otherwise fails to perform its obligations. To limit the counterparty risk associated with such transactions, the Fund conducts business only with financial institutions judged by the Adviser to present acceptable credit risk. Counterparty risk may arise because of market activities and developments, the counterparty's financial condition (including financial difficulties, bankruptcy, or insolvency), or other reasons. The Fund may obtain no or limited recovery of its investment, and any recovery may be significantly delayed.

Credit Default Swaps Risk. CDS are typically two-party financial contracts that transfer credit exposure between the two parties. Under a typical CDS, one party (the "seller") receives pre-determined periodic payments from the other party (the "buyer"). The seller agrees to make compensating specific payments to the buyer if a negative credit event occurs, such as the bankruptcy or default by the issuer of the underlying debt instrument. The use of CDS involves investment techniques and risks different from those associated with ordinary portfolio security transactions, such as potentially heightened counterparty, concentration and exposure risks.

CDX Indices Risk. CDX are benchmark indices made up of credit default swaps. The CDX in which the Fund will invest are issued by emerging market companies. The value of a CDX index will fluctuate in response to changes in the perceived creditworthiness or default experience of the basket of issuers to which the CDX provides exposure. CDX are susceptible to credit risk, counterparty risk, and other risks associated with CDS.

Derivatives Risk. A Fund's use of derivative instruments involves risks different from, or possibly greater than, the risks associated with investing directly in securities and other traditional investments. These risks include (i) the risk that the counterparty to a derivative transaction may not fulfil its contractual obligations; (ii) risk of mispricing or improper valuation; and (iii) the risk that changes in the value of the derivative may not correlate perfectly with the underlying asset, rate or index. Derivative prices are highly volatile and may fluctuate substantially during a short period of time. Such prices are influenced by numerous factors that affect the markets, including, but not limited to: changing supply and demand relationships; government programs and policies; national and international political and economic events, changes in interest rates, inflation and deflation and changes in supply and demand relationships.

Early Close/Trading Halt Risk. An exchange or market may close or issue trading halts on specific securities, or the ability to buy or sell certain securities or financial instruments may be restricted, which may prevent a Fund from buying or selling certain securities or financial instruments. In these circumstances, a Fund may be unable to rebalance its portfolio, may be unable to accurately price its investments and may incur substantial trading losses.

Emerging Markets Risk. The Fund may invest in countries with newly organized or less developed securities markets. Investments in emerging markets typically involves greater risks than investing in more developed markets. Generally, economic structures in these countries are less diverse and mature than those in developed countries and their political systems tend to be less stable. Emerging market countries may have different regulatory, accounting, auditing, and financial reporting and record keeping standards and may have material limitations on PCAOB inspection, investigation, and enforcement. Therefore, the availability and reliability of information, particularly financial information, material to an investment decision in emerging market companies may be limited in scope and reliability as compared to information provided by U.S. companies. Emerging market economies may be based on only a few industries. As a result, security issuers, including governments, may be more susceptible to economic weakness and more likely to default. Emerging market countries also may have relatively unstable governments, weaker economies, and less-developed legal systems with fewer security holder rights. Investments in emerging markets countries may be affected by government policies that restrict foreign investment in certain issuers or industries. The potentially smaller size of securities markets in emerging market countries and lower trading volumes can make investments relatively illiquid and potentially more volatile than investments in developed countries, and such securities may be subject to abrupt and severe price declines. Due to this relative lack of liquidity, the Fund may have to accept a lower price or may not be able to sell a portfolio security at all. An inability to sell a portfolio position can adversely affect the Fund's value or prevent the Fund from being able to meet cash obligations or take advantage of other investment opportunities.

ETF Structure Risk: Each Fund is structured as an ETF and will invest in underlying ETFs. As a result, each Fund is subject to special risks, including:

- *Not Individually Redeemable.* A Fund's Shares ("Shares") are not redeemable by retail investors and may be redeemed only by the Authorized Participant at net asset value ("NAV") and only in Creation Units. A retail investor generally incurs brokerage costs when selling shares.
- *Trading Issues.* Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable, such as extraordinary market volatility. There can be no assurance that Shares will continue to meet the listing requirements of the Exchange, which may result in a Fund's shares being delisted. An active trading market for the Shares may not be developed or maintained. If the Shares are traded outside a collateralized settlement system, the number of financial institutions that can act as Authorized Participants that can post collateral on an agency basis is limited, which may limit the market for the Shares.
- *Market Price Variance Risk.* Individual Shares of a Fund that are listed for trading on the Exchange can be bought and sold in the secondary market at market prices. The market prices of Shares will fluctuate in response to changes in NAV and supply and demand for Shares. There may be times when the market price and the NAV vary significantly and you may pay more than NAV when buying Shares on the secondary market, and you may receive less than NAV when you sell those Shares. The market price of Shares, like the price of any exchange-traded security, includes a "bid-ask spread" charged by the exchange specialists, market makers or other participants that trade the particular security. In times of severe market disruption, the bid-ask spread often increases significantly. This means that Shares may trade at a discount to NAV and the discount is likely to be greatest when the price of Shares is falling fastest, which may be the time that you most want to sell your Shares. A Fund's investment results are measured based upon the daily NAV of a Fund over a period of time. Investors purchasing and selling Shares in the secondary market may not experience investment results consistent with those experienced by those Authorized Participants creating and redeeming directly with a Fund.
 - In times of market stress, market makers may step away from their role market making in shares of ETFs and in executing trades, which can lead to differences between the market value of Shares and the Fund's NAV.
 - The market price for the Shares may deviate from a Fund's NAV, particularly during times of market stress, with the result that investors may pay significantly more or significantly less for Shares than a Fund's NAV, which is reflected in the bid and ask price for Fund shares or in the closing price.

- In stressed market conditions, the market for the Shares may become less liquid in response to the deteriorating liquidity of a Fund's portfolio. This adverse effect on the liquidity of the Shares may, in turn, lead to differences between the market value of the Shares and a Fund's NAV.
- *Closure of Underlying Securities Market.* To the extent that all or a portion of a Fund's underlying securities trade in a market that is closed when the market in which the Fund's shares are listed and trading in that market is open, there may be changes between the last quote from the closed foreign market and the value of such security during the Fund's domestic trading day. In turn, this could lead to differences between the market price of the Fund's shares and the underlying value of its shares.
- *Authorized Participant Risk.* Only an Authorized Participant may engage in creation or redemption transactions directly with a Fund. A Fund has a limited number of institutions that may act as an Authorized Participant on an agency basis (*i.e.*, on behalf of other market participants). To the extent that Authorized Participants exit the business or are unable to proceed with creation or redemption orders with respect to a Fund and no other Authorized Participant is able to step forward to create or redeem Creation Units, a Fund's shares may be more likely to trade at a premium or discount to NAV and possibly face trading halts or delisting. Authorized Participant concentration risk may be heightened for securities or instruments that have lower trading volumes.

Fixed Income Securities Risk. Fixed income risk factors include credit risk (the debtor may default) and prepayment risk (the debtor may pay its obligation early or later than expected, potentially reducing the amount of interest payments or extending time to principal repayment). These risks could affect the value of a particular investment possibly causing the Fund's share price and total return to be reduced and fluctuate more than other types of investments. When a Fund invests in fixed income securities the value of your investment in a Fund will fluctuate with changes in interest rates. Typically, a rise in interest rates causes a decline in the value of fixed income securities. In general, the market price of debt securities with longer maturities will increase or decrease more in response to changes in interest rates than shorter-term securities. If the U.S. Federal Reserve's Federal Open Market Committee ("FOMC") raises the federal funds interest rate target, interest rates across the U.S. financial system may rise. However, the magnitude of rate changes across maturities and borrower sectors is uncertain. Rising rates may decrease liquidity and increase volatility, which may make portfolio management more difficult and costly to a Fund and its shareholders. Additionally, default risk increases if issuers must borrow at higher rates. Generally, these changing market conditions may cause a Fund's share price to fluctuate or decline more than other types of equity investments.

Foreign Currency Risk. The Fund holds investments that provide exposure to non-U.S. currencies, currency exchange rates or interest rates denominated in such currencies. Changes in currency exchange rates and the relative value of non-U.S. currencies will affect the value of the Fund's investment and the value of Fund shares. Currency exchange rates can be very volatile and can change quickly and unpredictably. As a result, the value of an investment in the Fund may change quickly and without warning and your investment in the Fund may experience losses.

Foreign Investment Risk. The Fund may invest in securities domiciled in countries outside the U.S. and Canada that may experience more rapid and extreme changes in value than a fund that invests exclusively in securities of U.S. and Canadian companies. These investments may be subject to additional risks, including political and economic risks, less governmental regulation and supervision of foreign stock exchanges, brokers and listed companies, civil conflicts and war, greater volatility, expropriation and nationalization risks, currency fluctuations, higher transaction costs, delayed transaction settlement, foreign ownership limits, foreign withholding taxes, difficulties in obtaining legal judgements, repatriation of capital and less stringent investor protection, disclosure, and accounting standards than those of U.S. and Canadian markets. The potential departure of one or more other countries from the European Union could have significant political and financial consequences for global markets.

Forward Contracts Risk. A decision as to whether, when, and how to use forward contracts involves the exercise of skill and judgment and even a well-conceived forward contract transaction may be unsuccessful because of market behavior or unexpected events. The primary risks associated with the use of forward contracts, which may adversely affect the Fund's net asset value ("NAV") and total return, are (i) possible lack of a liquid secondary market for a forward contract and the resulting inability to close a forward contract when desired; (ii) losses caused by unanticipated market movements, which are potentially unlimited; (iii) incorrect predictions of the direction of currency exchange rates and other economic factors; (iv) the possibility that the counterparty will default in the performance of its obligations; and (v) if the Fund has insufficient cash, it may have to sell securities from its portfolio to meet variation margin requirements, and the Fund may have to sell securities at a time when it may be disadvantageous to do so.

Futures Contract Risk. The successful use of futures contracts draws upon the adviser's skill and experience with respect to such instruments and are subject to special risk considerations. The primary risks associated with the use of futures contracts are (a) the imperfect correlation between the change in market value of the instruments held by a Fund and the price of the forward or futures contract; (b) possible lack of a liquid secondary market for a forward or futures contract and the resulting inability to close a forward or futures contract when desired; (c) investments in futures contracts involves leverage, which means a small percentage of assets in futures can have a disproportionately large impact on a Fund and a Fund can lose more than the principal amount invested; (d) losses caused by unanticipated market movements, which are potentially unlimited (e) the adviser's inability to predict correctly the direction of securities prices, interest rates, currency exchange rates and other economic factors; (f) the possibility that the counterparty will default in the performance of its obligations; and (g) if a Fund has insufficient cash, it may have to sell securities from its portfolio to meet daily variation margin requirements, and a Fund may have to sell securities at a time when it may be disadvantageous to do so.

Latin America Risk. The Fund is subject to certain risks specifically associated with investments in the securities of Latin American issuers. The economies of Latin American countries have in the past experienced considerable difficulties, including high inflation rates, high interest rates, high unemployment, government overspending and political instability. International economic conditions, particularly those in the United States, Europe and Asia, as well as world prices for oil and other commodities may also influence the development of Latin American economies. Many Latin American countries are highly reliant on the exportation of commodities and their economies may be significantly impacted by fluctuations in commodity prices and the global demand for certain commodities. Investments in Latin American countries may be subject to currency risks, such as restrictions on the flow of money in and out of a country, extreme volatility relative to the U.S. dollar, and devaluation, all of which could decrease the value of investments in Latin American companies. Other Latin American investment risks may include inadequate investor protection, less developed regulatory, accounting, auditing and financial standards, unfavorable changes in laws or regulations, natural disasters, corruption and military activity. The governments of many Latin American countries may also exercise substantial influence over many aspects of the private sector, and any such exercise could have a significant effect on companies in which the Fund invests. Securities of companies in Latin America may also be subject to significant price volatility.

Leverage Risk. Using derivatives can create leverage, which can amplify the effects of market volatility on each Fund's share price and make a Fund's returns more volatile. The use of leverage may cause a Fund to liquidate portfolio positions when it would not be advantageous to do so in order to satisfy its obligations. The use of leverage may also cause a Fund to have higher expenses than those of other funds that do not use such techniques.

Limited History of Operations. The Fund is a new ETF and therefore has a limited history of operations for investors to evaluate. Investors in a Fund bear the risk that a Fund may not be successful in implementing its investment strategies, may be unable to implement certain of its investment strategies or may fail to attract sufficient assets, any of which could result in a Fund being liquidated and terminated at any time without shareholder approval and at a time that may not be favorable for all shareholders. Such a liquidation could have negative tax consequences for shareholders and will cause shareholders to incur expenses of liquidation. The adviser may not achieve its intended result in managing a Fund.

Market and Geopolitical Risk. The increasing interconnectivity between global economies and financial markets increases the likelihood that events or conditions in one region or financial market may adversely impact issuers in a different country, region or financial market. Securities in a Fund's portfolio may underperform due to inflation (or expectations for inflation), interest rates, global demand for particular products or resources, natural disasters, pandemics, epidemics, terrorism, international conflicts, regulatory events and governmental or quasi-governmental actions. The occurrence of global events similar to those in recent years may result in market volatility and may have long term effects on both the U.S. and global financial markets. The novel coronavirus (COVID-19) global pandemic and the aggressive responses taken by many governments, including closing borders, restricting international and domestic travel, and the imposition of prolonged quarantines or similar restrictions, as well as the forced or voluntary closure of, or operational changes to, many retail and other businesses had negative impacts, and in many cases severe negative impacts, on markets worldwide. It is not known how long such impacts, or any future impacts of other significant events described above, will or would last, but there could be a prolonged period of global economic slowdown, which may impact your investment.

Non-Diversification Risk. Because the Fund is non-diversified and may invest a greater portion of its assets in fewer issuers than a diversified fund, changes in the market value of a single portfolio holding could cause greater fluctuations in the Fund's share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a single portfolio holding or relatively small number of portfolio holdings to have a greater impact on the Fund's performance.

PORTFOLIO HOLDINGS DISCLOSURE: A description of the Fund's policies and procedures regarding the release of portfolio holdings information is available in the Fund's Statement of Additional Information ("SAI").

CYBERSECURITY: The computer systems, networks and devices used by the Fund and its service providers to carry out routine business operations employ a variety of protections designed to prevent damage or interruption from computer viruses, network failures, computer and telecommunication failures, infiltration by unauthorized persons and security breaches. Despite the various protections utilized by the Fund and its service providers, systems, networks, or devices potentially can be breached. The Fund and its shareholders could be negatively impacted as a result of a cybersecurity breach.

Cybersecurity breaches can include unauthorized access to systems, networks, or devices; infection from computer viruses or other malicious software code; and attacks that shut down, disable, slow, or otherwise disrupt operations, business processes, or website access or functionality. Cybersecurity breaches may cause disruptions and impact the Fund's business operations, potentially resulting in financial losses; interference with the Fund's ability to calculate its NAV; impediments to trading; the inability of the Fund, the adviser, and other service providers to transact business; violations of applicable privacy and other laws; regulatory fines, penalties, reputational damage, reimbursement or other compensation costs, or additional compliance costs; as well as the inadvertent release of confidential information.

Similar adverse consequences could result from cybersecurity breaches affecting issuers of securities in which the Fund invests; counterparties with which the Fund engages in transactions; governmental and other regulatory authorities; exchange and other financial market operators, banks, brokers, dealers, insurance companies, and other financial institutions (including financial intermediaries and service providers for the Fund's shareholders); and other parties. In addition, substantial costs may be incurred by these entities in order to prevent any cybersecurity breaches in the future.

MANAGEMENT

INVESTMENT ADVISER: Simplify Asset Management Inc. (“SAMI”), located at 222 Broadway, 22nd Floor, New York NY 10038, serves as the Fund’s investment adviser. The adviser is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended, and manages all other series in the Trust.

Subject to the oversight of the Board of Trustees, SAMI provides or oversees the provision of investment advisory, portfolio management and administrative services to the Fund pursuant to an advisory agreement between the Fund and SAMI. SAMI has supervisory responsibility for the management and investment of the Fund’s assets and develops the investment objectives and investment policies for the Fund. SAMI also has full discretion to make all determinations with respect to the investment of the Fund’s assets that are not then managed by a sub-adviser.

SAMI is paid a monthly management fee at an annual rate (stated as a percentage of the average daily net assets of the Fund) as stated below. The management agreement between the Fund and SAMI provides that SAMI will pay substantially all operating expenses of the Fund, except for any interest expenses, taxes, brokerage expenses, future Rule 12b-1 fees (if any), acquired fund fees and expenses, expenses incidental to a meeting of the Fund’s shareholders, and the management fee. In addition to the excluded operating expenses, the Fund also pays non-operating expenses such as litigation and indemnification expenses and other expenses determined to be extraordinary by the Trust.

Fund	Management Fee
Simplify Gamma Emerging Market Bond ETF	0.95%

With respect to GAEM, the adviser has contractually agreed, through at least October 31, 2026 to waive its management fee to 0.75% of GAEM’s average daily net assets. This agreement may be terminated only by the Trust’s Board of Trustees on 60 days’ written notice to the adviser.

INVESTMENT SUB-ADVISER:

Gamma Asset Management LLC (“Gamma”), located at Edificio Ochoa 500 Calle De La Tanca, Suite 305, San Juan, Puerto Rico, serves as investment sub-adviser to the Simplify Gamma Emerging Market Bond ETF Fund. The Sub-Adviser is registered with the SEC as an investment adviser under the Investment Advisers Act of 1940, as amended. The Sub-Adviser was established in 2021 and provides wealth, institutional and investment advisory services to clients in the U.S. and Latin America. As of March 31, 2024, Gamma had over \$111 million in assets under management. Gamma is paid by the Adviser, not the Fund.

PORTFOLIO MANAGERS

David Berns, PhD, is the chief investment officer and co-founder of SAMI. Prior to co-founding SAMI in 2020, he founded Portfolio Designer, LLC, a company that specializes in portfolio design and from 2018 to 2019 was a managing director at Nasdaq Dorsey Wright. Prior to joining Nasdaq Dorsey Wright, Inc., he founded and developed a company that specializes in proprietary trading. He has specialized in developing asset allocation, portfolio management, and risk management systems for managing private and institutional wealth. Mr. Berns has a PhD in Physics from the Massachusetts Institute of Technology in the field of Quantum Computation.

Ken Miller is a Managing Director and Portfolio Manager of SAMI. Prior to joining SAMI, Mr. Miller was a Portfolio Manager at Longtail Alpha where he formulated both absolute return strategies for unconstrained accounts and tail-risk hedge solutions to add alpha versus passive hedge benchmarks. Prior to Longtail Alpha, Mr. Miller was an Executive Vice President at PIMCO where he managed G10 bond portfolios and traded equity, fixed income, and FX derivatives across the firm's accounts. Mr. Miller holds a Bachelor's degree in Applied Mathematics from UC Berkeley and a Master of Business Administration from the Marshall School at the University of Southern California.

Jeff Uenishi, CFA, FRM, is a Senior Vice President of SAMI. Prior to joining Simplify, Mr. Uenishi was a Senior Vice President at Pacific Alternative Asset Management Company ("PAAMCO"), where he was part of the risk management group. Prior to PAAMCO, Mr. Uenishi was a Portfolio Manager at PIMCO as a sector specialist on the government and derivatives desk. Mr. Uenishi holds a Bachelor's degree in Business Finance from California State University, Long Beach.

Manuel Pelayo Troncoso Acebal, CFA, is the chief executive officer of Gamma. Prior to being named CEO of Gamma in 2021, he served as a portfolio manager for a single family office in Dominican Republic focused on investing in emerging markets fixed income from 2016 to 2021. Prior to that, Mr. Troncoso was a portfolio manager with Beta Capital Management and Beta Capital Securities, both part of the Credit Andorra Group. Mr. Troncoso holds a Bachelor's Degree in Finance and Economics from the Carroll School of Management at Boston College.

Douglas Roman, CFA, CMT, CIO is an investment specialist with more than 35 years of experience managing assets for private and institutional clients. Prior to joining Gamma, Mr. Roman served as managing director and senior vice president of equity management for PNC Capital Advisors, the asset management division of PNC Bank ("PNC"). Prior to PNC, Mr. Roman held positions as chief investment officer of Millenium Advisors, senior investment analyst for the Vanguard Group, and director of research for Rittenhouse Financial Services.

Hector Negroni is the Founder and CEO of Foundation Credit and CIO of its liquid strategies. Mr. Negroni has been a pioneer in the municipal market over the last three decades, leading innovation in investing and proprietary trading, public/private financing, derivatives, securitized products and a broad range of structured solutions. His efforts have provided tens of billions of dollars of financing for infrastructure and essential government services. Prior to forming Foundation Credit, he was the head of municipal trading at Goldman Sachs and before joining Goldman, he worked at Société Générale, Lazard Frères and Citigroup in a variety of leadership roles. Mr. Negroni sits on the advisory boards of NAST's National Institute of Public Finance and the Milken Institute Program for Excellence and Equity in Public Finance. Mr. Negroni earned a B.S. from The Wharton School of the University of Pennsylvania.

Sudar Purushothaman is a Partner of Foundation Credit, Deputy CIO of its liquid strategies and a member of Foundation's Executive Committee. Mr. Purushothaman's responsibilities include developing and executing investment strategies, as well as risk management and analysis for the Foundation's liquid strategies. Prior to joining FCO in 2012, Mr. Purushothaman spent four years as a trader at Goldman Sachs on the municipal desk, focusing on high-yield and high-grade bond trading. Mr. Purushothaman received his B.S. from Stanford University and his M.S. in Applied Mathematics from New York University.

The SAI provides additional information about the Portfolio Managers' compensation, other accounts managed and ownership of Fund shares.

HOW SHARES ARE PRICED

The NAV of the Fund is determined at the close of regular trading (normally 4:00 p.m. Eastern Time) on each day the Exchange is open for business. NAV is computed by determining, the aggregate market value of all assets of the applicable Fund, less its liabilities, divided by the total number of shares outstanding ((assets-liabilities)/number of shares = NAV). The Exchange is closed on weekends and New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Thanksgiving Day and Christmas Day ("Exchange Close"). The NAV takes into account, the expenses and fees of the Fund, including management, administration, and distribution fees, which are accrued daily. The determination of NAV for the Fund for a particular day is applicable to all applications for the purchase of shares, as well as all requests for the redemption of Creation Units, received by the Fund (or an authorized broker or agent, or its authorized designee) before the close of trading on the Exchange on that day.

Generally, the Fund's portfolio securities, including securities issued by ETFs, are valued each day at the last quoted sales price on each security's primary exchange. Securities traded or dealt in upon one or more securities exchanges (whether domestic or foreign) for which market quotations are readily available and not subject to restrictions against resale shall be valued at the last quoted sales price on the primary exchange or, in the absence of a sale on the primary exchange, at the mean between the current bid and ask prices on such exchange. Securities primarily traded in the National Association of Securities Dealers' Automated Quotation System ("NASDAQ") National Market System for which market quotations are readily available shall be valued using the NASDAQ Official Closing Price. Securities that are not traded on any securities exchange (whether domestic or foreign) and for which over-the-counter market quotations are readily available generally shall be valued at the last sale price or, in the absence of a sale, at the mean between the current bid and ask price on such over-the-counter market. Debt securities not traded on an exchange may be valued at prices supplied by a pricing agent(s) based on broker or dealer supplied valuations or matrix pricing, a method of valuing securities by reference to the value of other securities with similar characteristics, such as rating, interest rate and maturity.

If market quotations are not readily available, securities will be valued at their fair market value as determined using the "fair value" procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that the fair value determined for a security may be materially different than the value that could be realized upon the sale of that security. The fair value prices can differ from market prices when they become available or when a price becomes available. The Board has delegated execution of these procedures to a fair value committee composed of one or more representatives from SAMI. The Adviser may enlist third party consultants such as an audit firm or financial officer of a security issuer on an as-needed basis to assist in determining a security-specific fair value. The Board reviews and ratifies the execution of this process and the resultant fair value prices at least quarterly to assure the process produces reliable results.

The Fund may use independent pricing services to assist in calculating the value of the Fund's portfolio securities. In addition, market prices for foreign securities are not determined at the same time of day as the NAV for the Fund.

In computing the NAV, the Fund values foreign securities held by the Fund at the latest closing price on the exchange in which it is traded immediately prior to closing of the Exchange. Prices of foreign securities quoted in foreign currencies are translated into U.S. dollars at current rates. If events materially affecting the value of a security in the Fund's portfolio, particularly foreign securities, occur after the close of trading on a foreign market but before the Fund prices its shares, the security will be valued at fair value. For example, if trading in a portfolio security is halted and does not resume before the Fund calculates its NAV, SAMI may need to price the security using the Fund's fair value pricing guidelines. Without a fair value price, short-term traders could take advantage of the arbitrage opportunity and dilute the NAV of long-term investors. Fair valuation of the Fund's portfolio securities can serve to reduce arbitrage opportunities available to short-term traders, but there is no assurance that fair value pricing policies will prevent dilution of the Fund's NAV by short term traders. The determination of fair value involves subjective judgments. As a result, using fair value to price a security may result in a price materially different from the prices used by other mutual funds to determine NAV, or from the price that may be realized upon the actual sale of the security.

HOW TO BUY AND SELL SHARES

Shares of the Fund are listed for trading on the respective Exchanges, as stated below. Share prices are reported in dollars and cents per Share. Shares can be bought and sold on the secondary market throughout the trading day like other publicly traded shares, and Shares typically trade in blocks of less than a Creation Unit. There is no minimum investment required. Shares may only be purchased and sold on the secondary market when the Exchange is open for trading. The Exchange is open for trading Monday through Friday and is closed on weekends and the following holidays, as observed: New Year's Day, Martin Luther King, Jr. Day, Presidents' Day, Good Friday, Memorial Day, Juneteenth, Independence Day, Labor Day, Thanksgiving Day and Christmas Day.

When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction.

Authorized Participants that have entered into a contract with the Fund's distributor may acquire Shares from the Fund, and Authorized Participants may tender their Shares for redemption directly to the Fund, at NAV per Share only in large blocks, or Creation Units, of 25,000 Shares. Purchases and redemptions directly with the Fund must follow the Fund's procedures, which are described in the SAI.

The Fund may be liquidated and terminated at any time without shareholder approval.

Ticker Symbol (Exchange)

Simplify Gamma Emerging Market Bond ETF

GAEM (NYSE Arca, Inc.)

Share Trading Prices

The approximate value of Shares, an amount representing on a per share basis the sum of the current market price of the securities accepted by the Fund in exchange for Shares and an estimated cash component, will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a "real-time" update of the NAV per Share because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Fund is not involved in, or responsible for, the calculation or dissemination of the approximate value of the Shares, and the Fund does not make any warranty as to the accuracy of these values.

Book Entry

Shares are held in book entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other securities that you hold in book entry or "street name" form.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

Shares can only be purchased and redeemed directly from the Fund in Creation Units by Authorized Participants that have entered into a contract with the Fund's distributor. The vast majority of trading in Shares occurs on the secondary market. Because the secondary market trades do not directly involve the Fund, it is unlikely those trades would cause the harmful effects of market timing, including dilution, disruption of portfolio management, increases in the Fund's trading costs and the realization of capital gains. With regard to the purchase or redemption of Creation Units directly with the Fund, to the extent effected in-kind (*i.e.*, for securities), those trades do not cause the harmful effects that may result from frequent cash trades. To the extent trades are effected in whole or in part in cash, those trades could result in dilution to the Fund and increased transaction costs, which could negatively impact the Fund's ability to achieve its investment objective. However, direct trading by Authorized Participants is critical to ensuring that Shares trade at or close to NAV. The Fund also employs fair valuation pricing to minimize potential dilution from market timing. In addition, the Fund imposes transaction fees on purchases and redemptions of Shares to cover the custodial and other costs incurred by the Fund in effecting trades. These fees increase if an investor substitutes cash in part or in whole for securities, reflecting the fact that the Fund's trading costs increase in those circumstances. Given this structure, the Trust has determined that it is not necessary to adopt policies and procedures to detect and deter market timing of the Shares.

DISTRIBUTION AND SERVICE PLAN

The Fund has adopted a distribution and service plan ("Plan") pursuant to Rule 12b-1 under the 1940 Act. Under the Plan, the Fund is authorized to pay distribution fees to the distributor and other firms that provide distribution and shareholder services ("Service Providers"). If a Service Provider provides these services, the Fund may pay fees at an annual rate not to exceed 0.25% of average daily net assets, pursuant to Rule 12b-1 under the 1940 Act.

No distribution or service fees are currently paid by the Fund and will not be paid by the Fund unless authorized by the Trust's Board. There are no current plans to impose these fees. In the event Rule 12b-1 fees were charged, over time they would increase the cost of an investment in the Fund.

DIVIDENDS, OTHER DISTRIBUTIONS AND TAXES

Shares are traded throughout the day in the secondary market on a national securities exchange on an intra-day basis and are created and redeemed in-kind and/or for cash in Creation Units at each day's next calculated NAV. In-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the Fund's portfolio that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders if the mutual fund needs to sell portfolio securities to obtain cash to meet net fund redemptions. These sales may generate taxable gains for the ongoing shareholders of the mutual fund, whereas the Shares' in-kind redemption mechanism generally will not lead to a tax event for the Fund or its ongoing shareholders.

Ordinarily, dividends from net investment income, if any, are declared and paid quarterly by the Fund. The Fund distributes its net realized capital gains, if any, to shareholders annually. The Fund may also pay a special distribution at the end of a calendar year to comply with federal tax requirements.

No dividend reinvestment service is provided by the Fund. Broker-dealers may make available the DTC book-entry Dividend Reinvestment Service for use by beneficial owners of the Fund for reinvestment of its dividend distributions. Beneficial owners should contact their broker to determine the availability and costs of the service and the details of participation therein. Brokers may require beneficial owners to adhere to specific procedures and timetables. If this service is available and used, dividend distributions of both income and realized gains will be automatically reinvested in additional whole shares of the Fund purchased in the secondary market.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

Taxes

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this Prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an individual retirement account, you need to be aware of the possible tax consequences when:

- The Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

Taxes on Distributions

Distributions from the Fund's net investment income, including net short-term capital gains, if any, are taxable to you as ordinary income, except that the Fund's dividends attributable to its "qualified dividend income" (*i.e.*, dividends received on stock of most domestic and certain foreign corporations with respect to which the Fund satisfies certain holding period and other restrictions), if any, generally are subject to federal income tax for non-corporate shareholders who satisfy those restrictions with respect to their Shares at the rate for net capital gain. A part of the Fund's dividends also may be eligible for the dividends-received deduction allowed to corporations -- the eligible portion may not exceed the aggregate dividends the Fund receives from domestic corporations subject to federal income tax (excluding Real Estate Investment Trusts) and excludes dividends from foreign corporations -- subject to similar restrictions. However, dividends a corporate shareholder deducts pursuant to that deduction are subject indirectly to the federal alternative minimum tax.

In general, your distributions are subject to federal income tax when they are paid, whether you take them in cash or reinvest them in the Fund (if that option is available). Distributions reinvested in additional Shares through the means of a dividend reinvestment service, if available, will be taxable to shareholders acquiring the additional Shares to the same extent as if such distributions had been received in cash. Distributions of net long-term capital gains, if any, in excess of net short-term capital losses are taxable as long-term capital gains, regardless of how long you have held the Shares.

Distributions in excess of a Fund's current and accumulated earnings and profits are treated as a tax-free return of capital to the extent of your basis in the Shares and as capital gain thereafter. A distribution will reduce the Fund's NAV per Share and may be taxable to you as ordinary income or capital gain (as described above) even though, from an investment standpoint, the distribution may constitute a return of capital.

By law, the Fund is required to withhold 28% of your distributions and redemption proceeds if you have not provided the Fund with a correct Social Security number or other taxpayer identification number and in certain other situations.

Taxes on Exchange-Listed Share Sales

Any capital gain or loss realized upon a sale of Shares is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less. The ability to deduct capital losses from sales of Shares may be limited.

Taxes on Purchase and Redemption of Creation Units

An Authorized Participant who exchanges securities for Creation Units generally will recognize a gain or a loss equal to the difference between the market value of the Creation Units at the time of the exchange and the sum of the exchanger's aggregate basis in the securities surrendered plus any Cash Component it pays. An AP who exchanges Creation Units for securities will generally recognize a gain or loss equal to the difference between the exchanger's basis in the Creation Units and the sum of the aggregate market value of the securities received plus any cash equal to the difference between the NAV of the Shares being redeemed and the value of the securities. The Internal Revenue Service ("Service"), however, may assert that a loss realized upon an exchange of securities for Creation Units cannot be deducted currently under the rules governing "wash sales" or for other reasons. Persons exchanging securities should consult their own tax advisor with respect to whether wash sale rules apply and when a loss might be deductible.

Any capital gain or loss realized upon redemption of Creation Units is generally treated as long-term capital gain or loss if the Shares have been held for more than one year and as short-term capital gain or loss if the Shares have been held for one year or less.

If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you purchased or sold and at what price. See "Tax Status" in the SAI for a description of the newly effective requirement regarding basis determination methods applicable to Share redemptions and the Fund's obligation to report basis information to the Service.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Fund. It is not a substitute for personal tax advice. Consult your personal tax advisor about the potential tax consequences of an investment in the Shares under all applicable tax laws. See "Tax Status" in the SAI for more information.

FUND SERVICE PROVIDERS

Bank of New York Mellon is the Fund's administrator, transfer agent, custodian and fund accountant. It has its principal office at 240 Greenwich St., New York, NY 10286, and is primarily in the business of providing administrative, fund accounting and transfer agent services to retail and institutional mutual funds.

Foreside Financial Services, LLC (the "Distributor"), located at Three Canal Plaza, Suite 100, Portland, ME 04101, is the distributor for the shares of the Fund. The Distributor is a registered broker-dealer and member of the Financial Industry Regulatory Authority, Inc. ("FINRA").

Thompson Hine LLP, 41 South High Street, 17th Floor, Columbus, OH 43215, serves as legal counsel to the Trust.

Cohen & Company, Ltd., located at 1350 Euclid Ave., Suite 800, Cleveland, OH 44115, serves as the Fund's independent registered public accounting firm. The independent registered public accounting firm is responsible for auditing the annual financial statements of the Fund.

OTHER INFORMATION

Continuous Offering

The method by which Creation Units of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Units of Shares are issued and sold by the Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act of 1933, as amended (the “Securities Act”), may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Units after placing an order with the Distributor, breaks them down into constituent Shares and sells the Shares directly to customers or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker dealers who are not “underwriters” but are participating in a distribution (as contrasted to ordinary secondary trading transactions), and thus dealing with Shares that are part of an “unsold allotment” within the meaning of Section 4(3)(C) of the Securities Act, would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. This is because the prospectus delivery exemption in Section 4(3) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker dealer firms should note that dealers who are not underwriters but are participating in a distribution (as contrasted with ordinary secondary market transactions) and thus dealing with Shares that are part of an overallotment within the meaning of Section 4(3)(A) of the Securities Act would be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. Firms that incur a prospectus delivery obligation with respect to Shares are reminded that, under Rule 153 of the Securities Act, a prospectus delivery obligation under Section 5(b)(2) of the Securities Act owed to an exchange member in connection with a sale on the Exchange is satisfied by the fact that the prospectus is available at the Exchange upon request. The prospectus delivery mechanism provided in Rule 153 is only available with respect to transactions on an exchange.

Dealers effecting transactions in the Shares, whether or not participating in this distribution, are generally required to deliver a Prospectus. This is in addition to any obligation of dealers to deliver a Prospectus when acting as underwriters.

Certain Conditions on Certain Shareholder Legal Actions

Pursuant to the Trust’s primary governing document, the Agreement and Declaration of Trust, shareholders wishing to pursue a derivative action (a suit brought by a shareholder on behalf of a Fund) are subject to various conditions including: (i) Trustees must have a reasonable amount of time to assess a request for action, (ii) at least 10% of shareholders must participate in the action, and (iii) expenses of a failed action are borne by the complaining shareholders. However, condition (iii) does not apply to actions brought under federal securities laws.

FINANCIAL HIGHLIGHTS

Because the Fund has only recently commenced investment operations, no financial highlights are available for the Fund at this time. In the future, financial highlights will be presented in this section of the Prospectus.

Adviser	Simplify Asset Management Inc. 222 Broadway 22 nd Floor New York, NY 10038	Distributor	Foreside Financial Services, LLC Three Canal Plaza, Suite 100, Portland, ME 04101
